

“WHAT TO EXPECT DURING SEWER REHABILITATION”
CITY OF ST PAUL SEWER LINING PROJECT
Winter Thru Summer 2022

The City of St Paul needs to rehabilitate the sanitary sewer that serves your neighborhood. Instead of digging up the street and installing a new sewer pipe, the sewer will be repaired by installing a pipe liner within the existing sewer. **There is no assessment to property owners for this work.** The cost of this work is funded by your sewer usage fees.

What you need to do:

- Watch for notification from contractor via door hanger, telephone, or face to face.
- Property owners and/or building managers: please distribute this notification postcard.
- Adhere to parking restrictions and temporary traffic control measures.
- On the day of sewer lining:
 - o Your sewer service will be blocked and out of service.
 - o Please pour one gallon of water into all floor drains to restrict potential odors.
 - o Please restrict water usage. Too much water usage will cause your sewer to back-up.
- If you smell a strong glue-like odor inside your house and/or experience sewer problems, contact a City Inspector.
- If your property isn't on a street listed (reverse), you can use water but it's still advised to pour water down your drains.

What the contractor will do:

- Mobilize equipment, restrict parking, and install temporary traffic control measures.
- Clean the sewer and rehabilitate it by installing a sewer liner.
- Notify you one week prior to blocking off your sewer service.
- Notify you one day prior to blocking off your sewer service.
- Block off your sewer service on the day of sewer lining (if on your block).
