Enovis project ID: E200572
Project: FORD-Twin Cities Assembly Plant
Project number: DE000440.0001.00005
Laboratory: TestAmerica - North Canton
Laboratory submittal: 11664-1
Sample date: 2012-05-24
Report received by Enovis: 2012-06-11
Initial Data Verification completed by Enovis: 2012-06-12

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the Enovis Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

1 Water sample(s) were analyzed for GCMS VOC, GCMS SVOC, PCB, GC Other and Metals parameter(s).
4 Solid sample(s) were analyzed for GCMS VOC, GCMS SVOC, PCB, GC Other and Metals parameter(s). 1 Trip blank and 1 Methanol trip blank were analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the Enovis CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The following minor QC exceptions or missing information were noted:

GCMS VOC method blank for QC batch 45549 had a detection below the RL for dichlorodifluoromethane. Client samples -001, -002, -005, -006 and -007 results for this analyte should be considered to be non-detect at the RL and qualified with UB flags. QC batch 46002 method blank had detections below the RL for 1,2,3-trichlorobenzene, 1,2,4-trichlorobenzene and hexachlorobutadiene. Qualification of client sample results were not required based on these QC batch 46002 method blank detections.

GCMS VOC trip blank and methanol trip blank had detections below the RL for dichlorodifluoromethane and methylacetate. Client samples -001, -002, -003 and -005 methylacetate results should be considered to be non-detect at the RL and qualified with UB flags.

GCMS VOC LCS recoveries were outside of laboratory control limits biased high for QC batch 45549 vinyl chloride and QC batch 46002 1,1,2-trichloroethane and 1,2-dibromoethane results. Qualification of client sample results was not required based on these high bias QC outliers.

GCMS SVOC method blank for QC batch 45551 had a detection below the RL for caprolactam. Qualification of client sample results was not required based on this method blank detection.

GCMS SVOC and METALS QC batch MS recovery outliers were either not performed on a client sample or did not involve client sample target analytes. Qualification of client sample results was not required based on these matrix QC outliers.

Metals method blank for QC batch 45760 had detections below the RL for barium, calcium, potassium, magnesium and manganese. Qualification of client sample results was not required based on these method blank detections.

DRO method blank had a detection below the RL. Qualification of client sample results was not required based on this method blank detection.

DRO LCS/LCSduplicate RPD was an outlier for QC batch 45858. Qualification of client sample results was not required based on this QC outlier alone.

PCB surrogate recoveries were outside of laboratory control limits biased low for 1 out of 2 surrogates in client sample -004. Qualification of client sample results was not required based on this QC outlier alone.

The definitions of the qualifiers used for this data package are defined in the analytical report. Enovis valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory's analytical report access the Enovis CLMS at http://enovis-inc.com/enovis53/index.cfm.

Enovis Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Laboratory submittal: 16953-1
Sample date: 2012-10-29
Report received by Enovis: 2012-11-14
Initial Data Verification completed by Enovis: 2012-11-15

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the Enovis Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

8 Soil sample(s) were analyzed for GCMS VOC, GCMS SVOC, PCB, GC Other and Metals parameter(s). 1 Aqueous sample was analyzed for GCM VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values. Qualifiers added during verification have been added to the electronic data which is available for download from the Enovis CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The following minor QC exceptions or missing information were noted:

GC PCB Batch QC MS/MSD was not performed on a sample from this submittal. Qualification was not required based on this sample/matrix specific QC outlier.

Metals Batch QC MB had a detection below the RL for barium. Qualification of client sample results were not required based on this method blank detection.

Metals Batch QC MS/MSD was performed on client sample -1. The MS %R was outside of laboratory control limits biased high for barium while the MSD %R was outside of laboratory control limits biased high for chromium. In addition, the associated RPD for chromium exceeded the laboratory control limit. Client sample -1 results for chromium only should be considered estimated and qualified with a J flag.

Percent moisture data was not used to determine dry weight sample corrections (percent solids utilized) so qualifications were not required based on the percent moisture duplicate RPD outlier.

The definitions of the qualifiers used for this data package are defined in the analytical report. Enovis valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory's analytical report access the Enovis CLMS at http://enovis-inc.com/enovis53/index.cfm.

Enovis Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Enovis project ID: E200572

Project number: DE000440.0001.00005
Laboratory: TestAmerica - North Canton
Laboratory submittal: 16953-1
Sample date: 2012-10-29
Report received by Enovis: 2012-11-14
Initial Data Verification completed by Enovis: 2012-11-15

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the Enovis Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

8 Soil sample(s) were analyzed for GCMS VOC, GCMS SVOC, PCB, GC Other and Metals parameter(s). 1 Aqueous sample was analyzed for GCM VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values. Qualifiers added during verification have been added to the electronic data which is available for download from the Enovis CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The following minor QC exceptions or missing information were noted:

GC PCB Batch QC MS/MSD was not performed on a sample from this submittal. Qualification was not required based on this sample/matrix specific QC outlier.

Metals Batch QC MB had a detection below the RL for barium. Qualification of client sample results were not required based on this method blank detection.

Metals Batch QC MS/MSD was performed on client sample -1. The MS %R was outside of laboratory control limits biased high for barium while the MSD %R was outside of laboratory control limits biased high for chromium. In addition, the associated RPD for chromium exceeded the laboratory control limit. Client sample -1 results for chromium only should be considered estimated and qualified with a J flag.

Percent moisture data was not used to determine dry weight sample corrections (percent solids utilized) so qualifications were not required based on the percent moisture duplicate RPD outlier.

The definitions of the qualifiers used for this data package are defined in the analytical report. Enovis valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory's analytical report access the Enovis CLMS at http://enovis-inc.com/enovis53/index.cfm.

Enovis Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

Enovis project ID: E200572
Project: FORD-Twin Cities Assembly Plant
Project number: DE000440.0001.00005
Laboratory: TestAmerica - North Canton
Laboratory submittal: 17018-1
Sample date: 2012-10-30
Report received by Enovis: 2012-11-16
Initial Data Verification completed by Enovis: 2012-11-19

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the Enovis Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

1 Water sample(s) was analyzed for GCMS VOC, GCMS SVOC, PCB, GC Other and Metals parameter(s).
11 Solid sample(s) were analyzed for GCMS VOC, GCMS SVOC, PCB, GC Other, Metals and General Chemistry parameter(s). 1 Water trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the Enovis CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The following minor QC exceptions or missing information were noted:

GCMS VOC method blank for QC batch 63987 had detections above the RL for methylene chloride and below the RL for ethylether, naphthalene and tetrahydrofuran. Client sample trip blank naphthalene result should be considered to be non-detect at the RL and qualified with a UB flag.

GCMS VOC trip blank had detections below the RL for acetone and naphthalene (qualified as non-detect at RL due to method blank detection noted above). Client sample -003 acetone result should be considered to be non-detect at the RL and qualified with a UB flag.

GCMS VOC QC batch 63576 and PCB QC batch 63627 did not have sufficient sample volumes available to perform the required MS/MSD QC samples.

PCB surrogate recoveries were outside of laboratory control limits biased low for 1 out of 2 surrogates in client sample -003. Qualification of client sample results was not required based on this QC outlier alone.

DRO sample container for client sample -003 was received not properly preserved (pH was greater than 2). Client sample -003 DRO results should be considered to be estimated and qualified with a J flag.

DRO surrogate recoveries were not reported with the sample results.

Metals method blanks had detections below the RL for barium in QC batches 63580 and 63809.

The definitions of the qualifiers used for this data package are defined in the analytical report. Enovis valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory's analytical report access the Enovis CLMS at http://enovis-inc.com/enovis53/index.cfm.

Enovis Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-3199-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/24/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.3, 2.4, 2.8, 2.9 and 3.3 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples ASB-115_2-4(20110822) (240-3199-1), ASB-115_4-6(20110822) (240-3199-2), ASB-116_4-6(20110822) (240-3199-3) and ASB-116_6-8(20110822) (240-3199-4) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/29/2011.

Naphthalene was detected in method blank MB 240-13470/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Tetrahydrofuran was detected in method blank MB 240-13470/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Tetrahydrofuran failed the recovery criteria high for LCS 240-13470/2-A.

Refer to the QC report for details.

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 13470 for these samples ASB-115_2-4(20110822) (240-3199-1), ASB-115_4-6(20110822) (240-3199-2), ASB-116_4-6(20110822) (240-3199-3), ASB-116_6-8(20110822) (240-3199-4).

Method(s) 8260B: The laboratory control sample for batch 13470 exceeded control limits for the following analyte: Tetrahydrofuran. Tetrahyfrofuran has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for this analyte. These results have been reported and qualified.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

The samples were analyzed on 08/29/2011.

Barium was detected in method blank MB 240-13406/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

Refer to the QC report for details.

No other difficulties were encountered during the metals analyses.

All other quality control parameters were within the acceptance limits.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-3201-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Naphthalene and Tetrahydrofuran were detected in method blank MB 240-13470/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Tetrahydrofuran failed the recovery criteria high for LCS 240-13470/2-A. Refer to the QC report for details.

Samples ASB-121_8-10(20110824) (240-3201-5)[13X], ASB-121_5-7(20110824) (240-3201-6)[5X] and ASB-122_6-8(20110824) (240-3201-8)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 13470 for these samples ASB-119_5-7(20110823) (240-3201-1), ASB-119_8-10(20110823) (240-3201-2), ASB-120_4-6(20110824) (240-3201-3), ASB-120_6-8(20110824) (240-3201-4), ASB-121_5-7(20110824) (240-3201-6), ASB-121_8-10(20110824) (240-3201-5), ASB-122_2-4(20110824) (240-3201-7), ASB-122_6-8(20110824) (240-3201-8).

Method(s) 8260B: The laboratory control sample for batch 13470 exceeded control limits for the following analyte: Tetrahydrofuran. Tetrahyfrofuran has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for this analyte. These results have been reported and qualified

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-3250-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/24/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.3, 2.4, 2.8, 2.9, and 3.3 C.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-3228-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/26/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt were 2.9 and 3.6 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-3236-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/26/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.9 and 3.6 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples ASB-123_2-4(20110824) (240-3236-1), ASB-123_6-8(20110824) (240-3236-2) and MB-002(20110825) (240-3236-3) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/30/2011.

Naphthalene and Tetrahydrofuran were detected in method blank MB 240-13679/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

The laboratory control sample (LCS) for batch 13679 exceeded control limits for the following analyte: 4-Methyl-2-Pentanone. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported. Refer to the QC report for details.

compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were analyzed on 08/31/2011 and 09/02/2011.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Dibenz(a,h)anthracene failed the recovery criteria low for the MS/MSD of sample 240-3244-4 in batch 240-14003. Refer to the QC report for details.

Sample ASB-123_6-8(20110824) (240-3236-2)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the SVOC analyses.

All other quality control parameters were within the acceptance limits.

WISCONSIN GRO

Samples ASB-123_2-4(20110824) (240-3236-1) and ASB-123_6-8(20110824) (240-3236-2) were analyzed for Wisconsin GRO in accordance with Wisconsin DNR Modified GRO. The samples were analyzed on 09/03/2011.

Sample ASB-123_6-8(20110824) (240-3236-2)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 13772 for these samples ASB-123_2-4(20110824) (240-3236-1) and ASB-123_6-8(20110824) (240-3236-2).

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-3264-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/27/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.4, 1.6, and 1.8 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples ASB-118_8-12(20110823) (240-3264-1), TB-002(20110824) (240-3264-2) and ASB-120_6-11(20110823) (240-3264-3) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 09/04/2011.

Methylene Chloride was detected in method blank MB 240-14331/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 13540.

Sample ASB-118_8-12(20110823) (240-3264-1)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following sample(s) submitted for volatiles analysis was received with insufficient preservation (pH >2): ASB-120_6-11(20110823) (240-3264-3).

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Sample ASB-118_8-12(20110823) (240-3264-1) was analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were analyzed on 09/06/2011.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 13540.

No difficulties were encountered during the SVOC analysis.

All quality control parameters were within the acceptance limits.

WISCONSIN DRO

WI Diesel Range Organics (C10-C28) was detected in method blank MB 240-13555/5-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 13555.

No other difficulties were encountered during the WI-DRO analyses.

All other quality control parameters were within the acceptance limits.

WISCONSIN GRO

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-3301-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/27/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 3.4 C.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples ASB-128_0-2(20110825) (240-3301-1), ASB-128_6-8(20110825) (240-3301-2), ASB-129_2-4(20110826) (240-3301-3), ASB-131_2-4(20110826) (240-3301-4), ASB-132_2-4(20110826) (240-3301-5) and ASB-134_2-4(20110826) (240-3301-6) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were analyzed on 09/07/2011 and 09/12/2011.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

2-Methylnaphthalene, Acenaphthene and Naphthalene exceeded the rpd limit for the MSD of sample ASB-131_2-4(20110826)MSD (240-3301-4) in batch 240-14603.

Refer to the QC report for details.

Sample ASB-134_2-4(20110826) (240-3301-6)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method(s) 8270C: The following sample(s) was diluted due to the nature of the sample matrix: ASB-134_2-4(20110826) (240-3301-6). Elevated reporting limits (RLs) are provided.

No other difficulties were encountered during the SVOC analyses.

All other quality control parameters were within the acceptance limits.

WISCONSIN DRO

Samples ASB-128_0-2(20110825) (240-3301-1), ASB-128_6-8(20110825) (240-3301-2), ASB-129_2-4(20110826) (240-3301-3), ASB-131_2-4(20110826) (240-3301-4), ASB-132_2-4(20110826) (240-3301-5) and ASB-134_2-4(20110826) (240-3301-6) were analyzed for Wisconsin DRO in accordance with Wisconsin DNR Modified DRO. The samples were analyzed on 09/01/2011 and 09/08/2011.

WI Diesel Range Organics (C10-C28) was detected in method blank MB 240-13702/9-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

WI Diesel Range Organics (C10-C28) failed the recovery criteria high for LCS 240-13702/7-A. Refer to the QC report for details.

Sample ASB-134_2-4(20110826) (240-3301-6)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method(s) WI-DRO: The continuing calibration verification (CCV) for DRO recovered above the upper control limit. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. ASB-128_6-8(20110825) (240-3301-2), ASB-129_2-4(20110826) (240-3301-3), ASB-131_2-4(20110826) (240-3301-4).

Method(s) WI-DRO: The laboratory control sample (LCS) 13702 exceeded control limits for the following analytes: DRO. The samples reported were ND therefore, no corrective action was necessary.

Method(s) WI-DRO: The laboratory control sample (LCS) 13702 and closing CCV recovered outside acceptance limits for DRO. There was insufficient sample to perform a re-extraction or re-analysis; therefore, the data have been reported.ASB-128_0-2(20110825) (240-3301-1), ASB-132_2-4(20110826) (240-3301-5), ASB-134_2-4(20110826) (240-3301-6).

Method(s) WI-DRO: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 13702 for these samples ASB-128_0-2(20110825) (240-3301-1), ASB-128_6-8(20110825) (240-3301-2), ASB-129_2-4(20110826) (240-3301-3), ASB-131_2-4(20110826) (240-3301-4), ASB-132_2-4(20110826) (240-3301-5) and ASB-134_2-4(20110826) (240-3301-6).

No other difficulties were encountered during the WI-DRO analyses.

All other quality control parameters were within the acceptance limits.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-3303-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/27/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.7, 2.8, 3.1 and 3.2 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples ASB-128_5-10(20110825) (240-3303-1), TB-003(20110825) (240-3303-2), ASB-129_4.5-9.5(20110826) (240-3303-3), ASB-130_0-5(20110826) (240-3303-4) and DUP-001 (240-3303-5) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 09/04/2011.

Methylene Chloride was detected in method blank MB 240-14331/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Refer to the QC report for details.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 13717.

No difficulties were encountered during the SVOC analyses.

All quality control parameters were within the acceptance limits.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: FORD TCAP - E200572

Report Number: 240-3396-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/30/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.5 and 2.3 C.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-3400-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/31/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.5 and 2.3 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples TB-004(20110829) (240-3400-1) and ASB-137_6-11(20110829) (240-3400-2) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 09/12/2011.

Several analytes were detected in method blank MB 240-14969/5 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

An MS/MSD was analyzed for batch 14969 but due to analyst error was not performed on a Minnesota sample.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Sample ASB-137_6-11(20110829) (240-3400-2) was analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were analyzed on 09/08/2011.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Benzo[a]pyrene failed the recovery criteria low for the MSD of sample 240-3353-7 in batch 240-14772. Refer to the QC report for details.

No other difficulties were encountered during the SVOC analysis.

All other quality control parameters were within the acceptance limits.

WISCONSIN DRO

Sample ASB-137_6-11(20110829) (240-3400-2) was analyzed for Wisconsin DRO in accordance with Wisconsin DNR Modified DRO. The samples were analyzed on 09/06/2011.

WI Diesel Range Organics (C10-C28) was detected in method blank MB 240-14158/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged. Refer to the QC report for details.

WI Diesel Range Organics (C10-C28) exceeded the rpd limit for LCSD 240-14158/3-A. Refer to the QC report for details.

The opening continuing calibration verification (CCV) for DRO recovered above the upper control limit. The samples associated with this CCV - ASB-137_6-11(20110829) (240-3400-2) and W-110830-RA-04 (240-3404-4 were non-detects for the affected analytes; therefore, the data have been reported.

No other difficulties were encountered during the WI-DRO analysis.

All other quality control parameters were within the acceptance limits.

WISCONSIN GRO

Sample ASB-137_6-11(20110829) (240-3400-2) was analyzed for Wisconsin GRO in accordance with Wisconsin DNR Modified GRO. The samples were analyzed on 09/08/2011.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 14588.

No difficulties were encountered during the WI-GRO analysis.

All quality control parameters were within the acceptance limits.

POLYCHLORINATED BIPHENYLS (PCBS)

Sample ASB-137_6-11(20110829) (240-3400-2) was analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082. The samples were analyzed on 09/06/2011.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-3401-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/31/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.9 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples ASB-139_6-8(20110829) (240-3401-1), ASB-140_6-8(20110829) (240-3401-2) and MB-00420110830 (240-3401-3) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 09/06/2011.

Naphthalene was detected in method blank MB 240-14142/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Insufficient sample volume was available to meet method-mandated requirements for matrix spike/matrix spike duplicate (MS/MSD) analyses for batch 14142 for these samples: ASB-139_6-8(20110829) (240-3401-1), ASB-140_6-8(20110829) (240-3401-2), and MB-00420110830 (240-3401-3).

The samples were preserved as frozen encores in the Pittsburgh lab, and they were shipped to the North Canton lab for analysis. The samples thawed in transit. The samples were re-frozen in North Canton, and the re-freeze date and time was entered as the sample preservation date. The re-freeze date was past the preservation holding time, so the samples have been flagged with a holding-time violation.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

WISCONSIN GRO

Samples ASB-139_6-8(20110829) (240-3401-1) and ASB-140_6-8(20110829) (240-3401-2) were analyzed for Wisconsin GRO in accordance with Wisconsin DNR Modified GRO. The samples were analyzed on 09/12/2011.

Insufficient samples was available to perform a matrix spike / matrix spike duplicate in batch 14601.

No difficulties were encountered during the WI-GRO analyses.

All quality control parameters were within the acceptance limits.

WISCONSIN DRO

Samples ASB-139_6-8(20110829) (240-3401-1) and ASB-140_6-8(20110829) (240-3401-2) were analyzed for Wisconsin DRO in accordance with Wisconsin DNR Modified DRO. The samples were analyzed on 09/09/2011.

WI Diesel Range Organics (C10-C28) was detected in method blank MB 240-14012/16-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged. Refer to the QC report for details.

Insufficient samples was available to perform a matrix spike / matrix spike duplicate in batch 14012.

Sample ASB-139_6-8(20110829) (240-3401-1) required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the WI-DRO analyses.

All other quality control parameters were within the acceptance limits.

TOTAL METALS (ICP)

Samples ASB-139_6-8(20110829) (240-3401-1) and ASB-140_6-8(20110829) (240-3401-2) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were analyzed on 09/02/2011.

No difficulties were encountered during the metals analyses.

All quality control parameters were within the acceptance limits.

PERCENT SOLIDS

Samples ASB-139_6-8(20110829) (240-3401-1) and ASB-140_6-8(20110829) (240-3401-2) were analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 09/01/2011.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-3402-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 08/31/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.9 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples ASB-144_2-4(20110830) (240-3402-5) and MB-005(20110830) (240-3402-6) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 09/06/2011.

Naphthalene was detected in method blank MB 240-14142/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Insufficient sample volume was available to meet method-mandated requirements for matrix spike/matrix spike duplicate (MS/MSD) analyses for batch 14142 for these samplesASB-144_2-4(20110830) (240-3402-5), MB-005(20110830) (240-3402-6).

The samples were preserved as frozen encores in the Pittsburgh lab, and they were shipped to the North Canton lab for analysis. The samples thawed in transit. The samples were re-frozen in North Canton, and the re-freeze date and time was entered as the sample preservation date. The re-freeze date was past the preservation holding time, so the samples have been flagged for a holding-time violation.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples ASB-141_2-4(20110830) (240-3402-1), ASB-141_6-8(20110830) (240-3402-2), ASB-142_2-4(20110830) (240-3402-3), ASB-143_1-3(20110830) (240-3402-4) and ASB-144_2-4(20110830) (240-3402-5) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were analyzed on 09/07/2011.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Several analytes failed the recovery criteria low for the MS of sample 240-3335-11 in batch 240-14495. 2,4-Dinitrophenol, 4,6-Dinitro-2-methylphenol, Caprolactam and N-Nitrosodiphenylamine failed the recovery criteria low for the MSD of sample 240-3335-11 in batch 240-14495. Several analytes exceeded the rpd limit. Refer to the QC report for details.

No other difficulties were encountered during the SVOC analyses.

All other quality control parameters were within the acceptance limits.

POLYCHLORINATED BIPHENYLS (PCBS)

Sample ASB-144_2-4(20110830) (240-3402-5) was analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082. The samples were analyzed on 09/08/2011.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: ASB-144_2-4(20110830) (240-3402-5), DUH1350-06 (240-3424-6), DUH1350-06 (240-3424-6 MS), and DUH1350-06 (240-3424-6 MSD).

No difficulties were encountered during the PCBs analysis.

All quality control parameters were within the acceptance limits.

WISCONSIN DRO

Samples ASB-141_2-4(20110830) (240-3402-1), ASB-141_6-8(20110830) (240-3402-2), ASB-142_2-4(20110830) (240-3402-3), ASB-143_1-3(20110830) (240-3402-4) and ASB-144_2-4(20110830) (240-3402-5) were analyzed for Wisconsin DRO in accordance with Wisconsin DNR Modified DRO. The samples were analyzed on 09/07/2011 and 09/09/2011.

WI Diesel Range Organics (C10-C28) was detected in method blank MB 240-14012/16-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged. Refer to the QC report for details.

Insufficient sample was available to perform a matrix spike / matrix spike duplicate (MS/MSD) for batch 14012.

The continuing calibration verification (CCV) for DRO recovered above the upper control limit. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. ASB-141_6-8(20110830) (240-3402-2), ASB-142_2-4(20110830) (240-3402-3), ASB-144_2-4(20110830) (240-3402-5)

No other difficulties were encountered during the WI-DRO analyses.

All other quality control parameters were within the acceptance limits.

TOTAL METALS (ICP)

Samples ASB-141_2-4(20110830) (240-3402-1), ASB-141_6-8(20110830) (240-3402-2), ASB-142_2-4(20110830) (240-3402-3), ASB-143_1-3(20110830) (240-3402-4) and ASB-144_2-4(20110830) (240-3402-5) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were analyzed on 09/02/2011.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-3408-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 09/01/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 4.0 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples ASB-146_6-8(20110831) (240-3408-1), ASB-146_0-2(20110831) (240-3408-2), ASB-145_6-8(20110830) (240-3408-3), ASB-147_0-2(20110831) (240-3408-4), ASB-147_6-8(20110831) (240-3408-5), ASB-148_4-6(20110831) (240-3408-6), ASB-148_0-2(20110831) (240-3408-7) and MB-006(20110831) (240-3408-8) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 09/06/2011, 09/07/2011 and 09/08/2011.

Naphthalene was detected in method blank MB 240-14142/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Samples ASB-146_6-8(20110831) (240-3408-1) and ASB-147_6-8(20110831) (240-3408-5) required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Insufficient sample volume was available to meet method-mandated requirements for matrix spike/matrix spike duplicate (MS/MSD) analyses for batch 14142 for these samples: ASB-145_6-8(20110830) (240-3408-3), ASB-146_0-2(20110831) (240-3408-2), ASB-147_0-2(20110831) (240-3408-4), ASB-148_4-6(20110831) (240-3408-6), and MB-006(20110831) (240-3408-8).

The samples were preserved as frozen encores in the Pittsburgh lab, and they were shipped to the North Canton lab for analysis. The samples thawed in transit. The samples were re-frozen in North Canton, and the re-freeze date and time was entered as the sample preservation date. The re-freeze date was past the preservation holding time, so the samples have been flagged with a holding-time violation.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples ASB-147_0-2(20110831) (240-3408-4), ASB-147_6-8(20110831) (240-3408-5), ASB-148_4-6(20110831) (240-3408-6) and ASB-148_0-2(20110831) (240-3408-7) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were analyzed on 09/09/2011.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Dibenz(a,h)anthracene failed the recovery criteria low for the MSD of sample ASB-147_0-2(20110831)MSD (240-3408-4) in batch 240-14794. Refer to the QC report for details.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-3454-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 09/02/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.0, 2.9 and 3.6 C.

The samples were analyzed on 09/12/2011.

Samples ASB-145_7-12(20110830) (240-3454-7) and TB-005(20110901) (240-3454-8) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 09/13/2011.

Naphthalene was detected in method blank MB 240-14890/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Methylene Chloride was detected in method blank MB 240-15099/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

Insufficient sample volume was available to meet method-mandated requirements for matrix spike/matrix spike duplicate (MS/MSD) analyses for batch 14890 for these samples ASB-145_0-2(20110830) (240-3454-1), ASB-149_0-2(20110831) (240-3454-12), ASB-150_2-4(20110831) (240-3454-4), ASB-151_0-2(20110831) (240-3454-2), ASB-152_4-6(20110831) (240-3454-3), ASB-153_2-4(20110901) (240-3454-9), ASB-155_0-2(20110901) (240-3454-5), ASB-156_0-2(20110901) (240-3454-6), ASB-157_0-2(20110901) (240-3454-13), and MB-007(20110901) (240-3454-14).

Methylcyclohexane failed the recovery criteria low for the MS/MSD of sample ASB-145_7-12(20110830) (240-3454-7) in batch

240-15099. 1,1,2-Trichloroethane failed the recovery criteria high.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

Sample ASB-145_7-12(20110830) (240-3454-7) had methylcyclohexane that just exceeded the calibration range and an MS/MSD was prepared at the time of sample preparation as well; therefore, there was insufficient sample for reanalysis of this sample at a dilution.

Samples ASB-154_1-3(20110901) (240-3454-10) and ASB-133_2-4(20110901) Were received with low methanol volume. Since the sample methanol appeared to have leaked from the bottles, sample integrity was compromised and the analyses were cancelled.

Sample ASB-155_0-2(20110901) appeared to be leaking when the sample was being prepared for screening. The bottle methanol volume appeared to be correct, but the sample integrity may have been compromised. The sample was analyzed and reported.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples ASB-151_0-2(20110831) (240-3454-2), ASB-152_4-6(20110831) (240-3454-3), ASB-150_2-4(20110831) (240-3454-4), ASB-155_0-2(20110901) (240-3454-5), ASB-156_0-2(20110901) (240-3454-6), ASB-153_2-4(20110901) (240-3454-9), ASB-154_1-3(20110901) (240-3454-10), ASB-133_2-4(20110901) (240-3454-11), ASB-149_0-2(20110831) (240-3454-12) and ASB-157_0-2(20110901) (240-3454-13) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were analyzed on 09/09/2011.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Bis(2-ethylhexyl) phthalate, Caprolactam and Di-n-butyl phthalate were detected in method blank MB 240-14528/17-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged. Refer to the QC report for details.

2,4-Dinitrophenol and 4,6-Dinitro-2-methylphenol failed the recovery criteria low for LCS 240-14528/18-A. Refer to the QC report for details.

2,4-Dinitrophenol, 4,6-Dinitro-2-methylphenol, Caprolactam and Hexachlorocyclopentadiene failed the recovery criteria low for the MS of sample 240-3408-4 in batch 240-14794.

Several analytes failed the recovery criteria low for the MSD of sample 240-3408-4 in batch 240-14794. Caprolactam exceeded the rpd limit. Refer to the QC report for details.

The following sample(s) was diluted due to the nature of the sample matrix: ASB-149_0-2(20110831) (240-3454-12), ASB-151_0-2(20110831) (240-3454-2), ASB-155_0-2(20110901) (240-3454-5), ASB-156_0-2(20110901) (240-3454-6). Elevated reporting limits (RLs) are provided.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-3519-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 09/03/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 3.9 C.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-3596-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 09/08/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.4 and 4.2 C.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-3605-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 09/08/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.4 and 4.2 C.

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 09/23/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 4.4 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples EB-01(20110914) (240-4162-2) and TB-006(20110922) (240-4162-3) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 09/28/2011.

Methylene Chloride was detected in method blank MB 240-17077/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Refer to the QC report for details.

1,1-Dichloroethane and 1,2-Dichloropropane failed the recovery criteria low for the MS/MSD of sample 240-3920-10 in batch 240-17077.

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with job 4162.

Refer to the QC report for details.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Sample EB-01(20110914) (240-4162-2) was analyzed for Semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were analyzed on 09/29/2011.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Method(s) 8270C: Sample EB-01(20110914) (240-4162-2) was received after sample holding times were expired.

Method(s) 8270C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 16590 for these samples EB-01(20110914) (240-4162-2).

No difficulties were encountered during the SVOC analysis.

All quality control parameters were within the acceptance limits.

WISCONSIN DRO

Sample EB-01(20110914) (240-4162-2) was analyzed for Wisconsin DRO in accordance with Wisconsin DNR Modified DRO. The samples were analyzed on 09/28/2011.

Method(s) Wisconsin DRO: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 16672 for these samples EB-01(20110914) (240-4162-2).

No difficulties were encountered during the WI-DRO analysis.

All quality control parameters were within the acceptance limits.

WISCONSIN GRO

Sample EB-01(20110914) (240-4162-2) was analyzed for Wisconsin GRO in accordance with Wisconsin DNR Modified GRO. The samples were analyzed on 09/27/2011.

Method(s) WI-GRO: The continuing calibration verification (CCV) for Wis GRO associated with batch 16677 recovered above the upper control limit. The sample associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. EB-01(20110914) (240-4162-2)

Method(s) Wisconsin GRO: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 16677 for these samples EB-01(20110914) (240-4162-2).

No difficulties were encountered during the WI-GRO analysis.

All quality control parameters were within the acceptance limits.

DISSOLVED METALS (ICP)

Sample ASB-166_7-12(20110906) (240-4162-1) was analyzed for dissolved metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were analyzed on 10/07/2011.

No difficulties were encountered during the metals analysis.

All quality control parameters were within the acceptance limits.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-3807-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 09/14/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt were 1.5 and 2.4 C.
