CADENA project ID: E200572
Project: FORD-Twin Cities Assembly Plant
Project number: DE000372.0003
Laboratory: TestAmerica - North Canton
Laboratory submittal: 52525-1
Sample date: 2015-06-25 2015-06-24
Report received by CADENA: 2015-07-15
Initial Data Verification completed by CADENA: 2015-07-17

The following minor QC exceptions or missing information were noted:

GCMS VOC QC batch 187301 did not include MS recovery data due to insufficient sample volume available according to the laboratory submittal case narrative.

WI-GRO and WI-DRO QC batch did not include MS recovery data and surrogate recoveries were not available for samples or QC.

WI-DRO QC batch LCS duplicate recovery as an outlier biased high along with an outlier for the LCS/LCSD RPD. Client samples -010, -011, -012 and -013 WI-DRO results should be considered to be estimated and qualified with J flags.

GCMS SVOC method blanks had detections below the RL for bis-2-ethylhexylphthalate and di-n-butylphthalate in QC batch 188799 and for bis-2-ethylhexylphthalate in QC batch 187803 and for bis-2-ethylhexylphthalate, caprolactam, di-n-butylphthalate, isophorone and phenol in QC batch 188303. Client samples -010, -011, -012 and -013 bis-2-ethylhexylphthalate results should be considered to be non-detect at the RL and qualified with UB flags.

GCMS SVOC QC batch 188303 LCS recoveries were outliers biased high for bis-2-ethylhexylphthalate. Client samples -010 and -012 were re-analyzed outside of the referenced holding time in response to this LCS outlier or surrogate recovery outliers. Re-analysis QC batch LCS recovery for this analyte was acceptable. Client sample re-analysis results should all be considered to be estimated and qualified with UJ flags based on the holding time exceedance and the bis-2-ethylhexylphthalate results are also qualified as non-detect as noted above due to associated method blank detections. The original GCMS SVOC sample results were all considered to be the final reportable values with the exception of the bis-2-ethylhexylphthalate for client samples -010 and -012 and the acid fraction analyte results for sample -012 (see surrogate recovery outliers qualifications below) which were reported from the re-analyses results.

GCMS SVOC sample -012 surrogate recoveries were outliers biased low and less than 10% for 1 out of 3 acid fraction surrogates in the original sample analysis. The GCMS SVOC acid fraction analyte results in the original analysis would all be considered to be unusable and qualified with R flags if non-detect and estimated with J flags if detected. The sample was re-analyzed as noted above with acceptable surrogate recoveries and these acid fraction results are considered to be estimated with UJ flags if non-detect and J flags if detected.

GCMS SVOC client sample -008 MS/MSD recoveries were outliers biased low for hexachlorocyclopentadiene and 2,4-dinitrophenol and the MS or MSD recovery but not both along with the MS/MSD RPD were outliers with the recovery biased low for hexachloroethane. Client sample -008 result for these analytes should be considered to be estimated and qualified with a J flag if detected and UJ flag if non-detect. MS or MSD recoveries but not both was an outlier biased low for 4,6-dinitro-2-methylphenol and the MS/MSD RPD was an outlier for pentachlorophenol. Qualification of client sample results was not required based on these QC outliers alone.

GCMS SVOC QC batch 187803, 188303 and 188744 and Metals QC batch 187370 and 187368 MS recovery outliers were not determined using samples from this submittal so qualification of client sample results was not required based on this sample-specific QC outlier.

Metals sample -006 MS/MSD recoveries were outliers biased low for antimony. Client sample -006 antimony results should be considered to be estimated and qualified with a J flag. MS/MSD recoveries were not considered to be reliable so were not used to qualify results due to elevated levels of target analyte relative to the amount spiked (4X rule) for aluminum, calcium, iron and manganese. MS or MSD recoveries but not both were outliers biased low for magnesium so qualification was not required based on this QC outlier alone.

Metals method blanks had detections below the RL in QC batch 187368 for magnesium, nickel and zinc and in QC batch 187589 for magnesium and zinc. Qualification of client sample results was not required based on these method blank detections.

13 Solid sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC VOC, GC Other and Metals parameter(s).

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

ANALYTICAL REPORT

Job Number: 240-52618-1

Job Description: Ford TCAP - E200572

For:
ARCADIS U.S., Inc.
28550 Cabot Drive
Suite 500
Novi, MI 48377

Attention: Kristoffer Hinskey

Approved for release.
John McFadden
Project Manager I
7/16/2015 11:10 AM

Designee for
Denise Pohl, Project Manager II
4101 Shuffel Street NW, North Canton, OH, 44720
(330)966-9789
denise.pohl@testamericainc.com
07/16/2015

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-52618-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 6/27/2015 10:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 3.2º C and 4.0º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples HA-11_0-1(20150625) (240-52618-1), HA-12_0-1(20150625) (240-52618-2), HA-13_0-1(20150625) (240-52618-3), HA-14_0-1(20150625) (240-52618-4), HA-15_0-1(20150625) (240-52618-5), HA-16_0-0.5(20150625) (240-52618-6), HA-17_0-1(20150625) (240-52618-7), HA-18_0-1(20150625) (240-52618-8) and MB_01(20150625) (240-52618-9) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 06/30/2015 and analyzed on 07/01/2015, 07/06/2015 and 07/07/2015.

A MS/MSD was prepared for batch 187478, but was analyzed in a different analytical batch. Batch includes HA-14_0-1(20150625) (240-52618-4) and HA-15_0-1(20150625) (240-52618-5), HA-16_0-0.5(20150625) (240-52618-6), HA-17_0-1(20150625) (240-52618-7), HA-18_0-1(20150625) (240-52618-8) and MB_01(20150625) (240-52618-9).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples HA-11_0-1(20150625) (240-52618-1), HA-12_0-1(20150625) (240-52618-2), HA-13_0-1(20150625) (240-52618-3), HA-14_0-1(20150625) (240-52618-4), HA-15_0-1(20150625) (240-52618-5), HA-16_0-0.5(20150625) (240-52618-6), HA-17_0-1(20150625) (240-52618-7) and HA-18_0-1(20150625) (240-52618-8) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 07/06/2015 and 07/13/2015 and analyzed on 07/12/2015 and 07/15/2015.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Bis(2-ethylhexyl) phthalate and Di-n-butyl phthalate were detected in method blank MB 240-188010/21-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Bis(2-ethylhexyl) phthalate was detected in method blank MB 240-188889/11-A at a level exceeding the reporting limit. If the associated

sample reported a result above the MDL and/or RL, the result has been flagged.

Bis(2-ethylhexyl) phthalate failed the recovery criteria high for LCS 240-188010/22-A.

Samples HA-13_0-1(20150625) (240-52618-3)[2X], HA-13_0-1(20150625) (240-52618-3)[2.5X], HA-16_0-0.5(20150625) (240-52618-6) [10X] and HA-16_0-0.5(20150625) (240-52618-6)[20X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The Method Blank and laboratory Control Sample (LCS) for batch 188453 associated with samples HA-11_0-1(20150625) (240-52618-1), HA-12_0-1(20150625) (240-52618-2), HA-13_0-1(20150625) (240-52618-3), HA-14_0-1(20150625) (240-52618-4), HA-15_0-1(20150625) (240-52618-5), HA-16_0-0.5(20150625) (240-52618-6), HA-17_0-1(20150625) (240-52618-7) and HA-18_0-1(20150625) (240-52618-8) had Bis(2-ethylhexyl) phthalate out of control. Upon re-extraction and re-analysis all QC met acceptance criteria, however, sample holding times had been exceeded. both sets of data will be reported.

The continuing calibration verification (CCV) associated with batch 189174 recovered above the upper control limit for N-Nitrosodiphenylamine and Pentachlorophenol. The samples associated with this CCV were non-detect for the affected analytes; therefore, the data have been reported. The following samples are impacted: HA-11_0-1(20150625) (240-52618-1), HA-12_0-1(20150625) (240-52618-2), HA-13_0-1(20150625) (240-52618-3), HA-14_0-1(20150625) (240-52618-4), HA-15_0-1(20150625) (240-52618-5), HA-16_0-0.5(20150625) (240-52618-6), HA-17_0-1(20150625) (240-52618-7) and HA-18_0-1(20150625) (240-52618-8).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

WISCONSIN GRO

Samples HA-11_0-1(20150625) (240-52618-1), HA-12_0-1(20150625) (240-52618-2), HA-13_0-1(20150625) (240-52618-3), HA-14_0-1(20150625) (240-52618-4), HA-15_0-1(20150625) (240-52618-5), HA-16_0-0.5(20150625) (240-52618-6), HA-17_0-1(20150625) (240-52618-7), HA-18_0-1(20150625) (240-52618-8) and MB_01(20150625) (240-52618-9) were analyzed for Wisconsin GRO in accordance with Wisconsin DNR Modified GRO. The samples were prepared and analyzed on 07/01/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

WISCONSIN DRO

Samples HA-11_0-1(20150625) (240-52618-1), HA-12_0-1(20150625) (240-52618-2), HA-13_0-1(20150625) (240-52618-3), HA-14_0-1(20150625) (240-52618-4), HA-15_0-1(20150625) (240-52618-5), HA-16_0-0.5(20150625) (240-52618-6), HA-17_0-1(20150625) (240-52618-7) and HA-18_0-1(20150625) (240-52618-8) were analyzed for Wisconsin DRO in accordance with Wisconsin DNR Modified DRO. The samples were prepared on 07/02/2015 and analyzed on 07/06/2015 and 07/07/2015.

WI Diesel Range Organics (C10-C28) failed the recovery criteria high for LCSD 240-187816/23-A. WI Diesel Range Organics (C10-C28) exceeded the RPD limit.

Sample HA-16_0-0.5(20150625) (240-52618-6)[50X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Significant peaks, readily distinguished from background, were detected in the following samples within five minutes after the end of the analytical window defined by the last component eluting in the WI Diesel Range Organics (C10-C28) : HA-11_0-1(20150625) (240-52618-1), HA-12_0-1(20150625) (240-52618-2), HA-13_0-1(20150625) (240-52618-3), HA-16_0-0.5(20150625) (240-52618-6), HA-17_0-1(20150625) (240-52618-7) and HA-18_0-1(20150625) (240-52618-8).

The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for preparation batch 240-187816 recovered outside control limits for the following analytes: WI Diesel Range Organics (C10-C28).

The laboratory control sample duplicate (LCSD) for preparation batch 240-187816 and analytical batch 240-188186 recovered outside acceptance limits for WI Diesel Range Organics (C10-C28). There was insufficient sample to perform a re-extraction or re-analysis; therefore, the data have been reported.

The laboratory control sample duplicate (LCSD) for preparation batch 240-187816 and analytical batch 240-188039 recovered outside acceptance limits for WI Diesel Range Organics (C10-C28). There was insufficient sample to perform a re-extraction or re-analysis; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL METALS (ICP)

Samples HA-11_0-1(20150625) (240-52618-1), HA-12_0-1(20150625) (240-52618-2), HA-13_0-1(20150625) (240-52618-3), HA-14_0-1(20150625) (240-52618-4), HA-15_0-1(20150625) (240-52618-5), HA-16_0-0.5(20150625) (240-52618-6), HA-17_0-1(20150625) (240-52618-7) and HA-18_0-1(20150625) (240-52618-8) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 07/01/2015 and analyzed on 07/02/2015 and 07/06/2015.

Magnesium and Zinc were detected in method blank MB 240-187589/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above

the MDL and/or RL, the result has been flagged.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY

Samples HA-11_0-1(20150625) (240-52618-1), HA-12_0-1(20150625) (240-52618-2), HA-13_0-1(20150625) (240-52618-3), HA-14_0-1(20150625) (240-52618-4), HA-15_0-1(20150625) (240-52618-5), HA-16_0-0.5(20150625) (240-52618-6), HA-17_0-1(20150625) (240-52618-7) and HA-18_0-1(20150625) (240-52618-8) were analyzed for total mercury in accordance with EPA SW-846 Method 7471A. The samples were prepared on 07/01/2015 and analyzed on 07/02/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples HA-11_0-1(20150625) (240-52618-1), HA-12_0-1(20150625) (240-52618-2), HA-13_0-1(20150625) (240-52618-3), HA-14_0-1(20150625) (240-52618-4), HA-15_0-1(20150625) (240-52618-5), HA-16_0-0.5(20150625) (240-52618-6), HA-17_0-1(20150625) (240-52618-7) and HA-18_0-1(20150625) (240-52618-8) were analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 06/30/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DATA REPORTING QUALIFIERS

Client: ARCADIS U.S., Inc. Job Number: 240-52618-1

Lab Section	Qualifier	Description
GC/MS VOA		
	F1	MS and/or MSD Recovery is outside acceptance limits.
	F2	MS/MSD RPD exceeds control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC/MS Semi VOA		
	B	Compound was found in the blank and sample.
	*	LCS or LCSD is outside acceptance limits.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	H	Sample was prepped or analyzed beyond the specified holding time
GC Semi VOA		
	*	LCS or LCSD is outside acceptance limits.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	*	RPD of the LCS and LCSD exceeds the control limits
Metals		
	B	Compound was found in the blank and sample.
	F1	MS and/or MSD Recovery is outside acceptance limits.
	4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Minneapolis, MN US 55401

CADENA project ID: E200572
Project: FORD-Twin Cities Assembly Plant
Project number: DE000372.0003
Laboratory: TestAmerica - North Canton
Laboratory submittal: 52618-1
Sample date: 2015-06-25
Report received by CADENA: 2015-07-16
Initial Data Verification completed by CADENA: 2015-07-17

The following minor QC exceptions or missing information were noted:

GCMS VOC CCV response outliers as noted in the laboratory submittal case narrative were not used to qualify results as part of this level 2 verification review.

GCMS VOC QC batch 187478 and Metals batch 187589 MS recovery outliers were not determined using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.

GCMS VOC trip blank had a detection below the RL for 1,2,4-trimethylbenzene. Client samples -006, -007 and -008 results for this analyte should be considered to be non-detect at the RL and qualified with UB flags.

WI-GRO and WI-DRO QC batch did not include MS recovery data and surrogate recoveries were not available for samples or QC.

WI-DRO QC batch LCS duplicate recovery as an outlier biased high along with an outlier for the LCS/LCSD RPD. Client samples -001, -002, -003, -004, -005, -006, -007 and -008 WI-DRO results should be considered to be estimated and qualified with J flags.

GCMS SVOC method blanks had detections below the RL for bis-2-ethylhexylphthalate and di-n-butylphthalate in QC batch 188010 and for bis-2-ethylhexylphthalte in QC batch 188889. Client samples -001, -002, -003, -004, -005, -006, -007 and -008 bis-2-ethylhexylphthalate and samples -001, -002, -004, -005, -007 and -008 di-n-butylphthalate results should be considered to be non-detect at the RL and qualified with UB flags.

GCMS VOC QC batch 188010 LCS recoveries were outliers biased high for bis-2-ethylhexylphthalte. All associated client samples were re-analyzed outside of the referenced holding time in response to this LCS outlier. Re-analysis QC batch LCS recovery for this analyte was acceptable. Client sample re-analysis results should all be considered to be estimated and qualified with UJ flags based on the holding time exceedance and the bis-2-ethylhexylphthalate results are also qualified as non-detect as noted above due to associated method blank detections. The original GCMS SVOC sample results were all considered to be the final reportable values with the exception of the bis-2-ethylhexylphthalate which was reported from the re-analyses results.

Metals method blanks had detections below the RL in QC batch 187589 for magnesium and zinc. Qualification of client sample results was not required based on these method blank detections.

8 Solid sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC VOC, GC Other and Metals parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

12/30/2015

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-59162-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 12/16/2015 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.5º C.

At the request of the client by email 12/16/2015, the PCBs were cancelled.

TCLP VOLATILE ORGANIC COMPOUNDS (GCMS)

Sample AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2) was analyzed for TCLP volatile organic compounds (GCMS) in accordance with EPA SW-846 Methods 1311/8260B. The samples were leached on 12/16/2015 and analyzed on 12/17/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILES ORGANICS COMPOUNDS (GCMS) WITH PARTICLE SIZE REDUCTION

Sample AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1) was analyzed for volatiles organics compounds (GCMS) with particle size reduction in accordance with EPA SW846 Methods 1311/8260B. The samples were leached on 12/17/2015 and analyzed on 12/21/2015.

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 240-211311 and analytical batch 240-211549 on these samples AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2) and TRIP BLANK (240-59162-3) .

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1), AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2) and TRIP BLANK (240-59162-3) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 12/17/2015 and analyzed on 12/19/2015 and 12/22/2015.

Acetone was detected in method blank MB 240-211311/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Methylene Chloride was detected in method blank MB 240-211311/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for

details.

Allyl chloride and Methyl acetate exceeded the RPD limit for LCSD 240-211311/3-A. Refer to the QC report for details.

Sample AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1)[2X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method(s) 8260B: The laboratory control sample (LCS) for preparation batch 240-211311 and analytical batch 240-211919 recovered outside acceptance limits for Methyl Acetate and 3-Chloro-1-propene. There was insufficient sample to perform a re-extraction or re-analysis; therefore, the data have been reported.

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 240-211311 and analytical batch 240-211919 on this sample AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1) .

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Sample AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2) was analyzed for TCLP semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Methods 1311/8270C. The samples were leached on 12/17/2015, prepared on 12/18/2015 and analyzed on 12/21/2015.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP GC/MS SEMIVOLATILES WITH PARTICLE SIZE REDUCTION

Sample AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1) was analyzed for GC/MS Semivolatiles in accordance with SW-846 Method 8270C. The samples were leached on 12/17/2015, prepared on 12/18/2015 and analyzed on 12/21/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1) and AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 12/17/2015 and analyzed on 12/20/2015.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

2,4,6-Tribromophenol (Surr) and 2-Fluorophenol (Surr) failed the surrogate recovery criteria low for AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1). Nitrobenzene-d5 (Surr) failed the surrogate recovery criteria high. Refer to the QC report for details.

Hexachlorocyclopentadiene failed the recovery criteria low for the MS of sample AREA-C-TRENCH-1_010_5-6(20151215)MS (240-59162-2) in batch 240-211630.

For the MSD of sample AREA-C-TRENCH-1_010_5-6(20151215)MSD (240-59162-2) in batch 240-211630, Hexachlorocyclopentadiene failed the recovery criteria low. Several analytes failed the recovery criteria high. Also, Carbazole exceeded the RPD limit.

Refer to the QC report for details.

Sample AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1)[50X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method(s) 8270C: The following sample was diluted due to the nature of the sample matrix: AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1). Elevated reporting limits (RLs) are provided.

Method(s) 3540C: Due to the matrix, the following sample could not be concentrated to the final method required volume: AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1). The reporting limits (RLs) are elevated proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

WISCONSIN GRO

Samples AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1), AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2) and TRIP BLANK (240-59162-3) were analyzed for Wisconsin GRO in accordance with Wisconsin DNR Modified GRO. The samples were prepared and analyzed on 12/18/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

WISCONSIN DRO

Samples AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1) and AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2) were analyzed for Wisconsin DRO in accordance with Wisconsin DNR Modified DRO. The samples were prepared on 12/18/2015 and analyzed on 12/22/2015.

WI Diesel Range Organics (C10-C28) was detected in method blank MB 240-211439/5-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Samples AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1)[100X] and AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2) [5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method(s) WI-DRO: Significant peaks, readily distinguished from background, were detected in the following samples within five minutes after the end of the analytical window defined by the last component eluting in the WI Diesel Range Organics (C10-C28) mix : AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1) and AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP METALS (ICP)

Sample AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2) was analyzed for TCLP metals (ICP) in accordance with EPA SW-846 Methods 1311/6010B. The samples were leached on 12/17/2015, prepared on 12/18/2015 and analyzed on 12/22/2015.

Potassium was detected in method blank MB 240-211510/2-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Arsenic, Chromium, Copper, Nickel and Potassium were detected in method blank LB 240-211400/1-B at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Calcium failed the recovery criteria low for the MSD of sample 240-59175-1 in batch 240-211881. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP METALS ICP WITH PARTICLE SIZE REDUCTION

Sample AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1) was analyzed for Metals ICP in accordance with EPA SW-846 Methods 1311/6010B. The samples were leached on 12/17/2015, prepared on 12/18/2015 and analyzed on 12/22/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL METALS (ICP)

Samples AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1) and AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 12/17/2015 and analyzed on 12/18/2015 and 12/22/2015.

Chromium was detected in method blank MB 240-211321/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Several analytes failed the recovery criteria low for the MS of sample AREA-C-TRENCH-1_010_4-5(20151215)MS (240-59162-1) in batch 240-212068. Several analytes failed the recovery criteria high.

For the MSD of sample AREA-C-TRENCH-1_010_4-5(20151215)MSD (240-59162-1) in batch 240-212068, Barium, Calcium, Iron and Manganese failed the recovery criteria low. Several analytes failed the recovery criteria high. Also, Barium and Iron exceeded the RPD limit.

Refer to the QC report for details.

Sample AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP MERCURY

Sample AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2) was analyzed for TCLP mercury in accordance with EPA SW-846 Methods 1311/7470A. The samples were leached on 12/17/2015, prepared on 12/18/2015 and analyzed on 12/21/2015.

Mercury was detected in method blank LB 240-211400/1-C at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP MERCURY WITH PARTICLE SIZE REDUCTION

Sample AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1) was analyzed for Mercury with particle size reduction in accordance with EPA SW-846 Methods 1311/7470A. The samples were leached on 12/17/2015, prepared on 12/18/2015 and analyzed on 12/21/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY

Samples AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1) and AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2) were analyzed for total mercury in accordance with EPA SW-846 Method 7471A. The samples were prepared on 12/17/2015 and analyzed on 12/18/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HEXAVALENT CHROMIUM

Samples AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1) and AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2) were analyzed for hexavalent chromium in accordance with EPA SW-846 Method 3060A/7196A. The samples were prepared on 12/23/2015 and analyzed on 12/24/2015.

Samples AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1)[5X] and AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method(s) 7196A: The following sample was diluted due to the nature of the sample matrix: AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TRIVALENT CHROMIUM

Samples AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1) and AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2) were analyzed for trivalent chromium in accordance with EPA SW-846 Method 7196A_CR3. The samples were analyzed on 12/22/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples AREA-C-TRENCH-1_010_4-5(20151215) (240-59162-1) and AREA-C-TRENCH-1_010_5-6(20151215) (240-59162-2) were analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 12/16/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DATA REPORTING QUALIFIERS

Client: ARCADIS U.S., Inc. Job Number: 240-59162-1

Lab Section	Qualifier	Description
GC/MS VOA		
	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	*	RPD of the LCS and LCSD exceeds the control limits
GC/MS Semi VOA		
	F1	MS and/or MSD Recovery is outside acceptance limits.
	F2	MS/MSD RPD exceeds control limits
	E	Result exceeded calibration range.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits
GC VOA		
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC Semi VOA		
	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
Metals		
	B	Compound was found in the blank and sample.
	F1	MS and/or MSD Recovery is outside acceptance limits.
	4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
	F2	MS/MSD RPD exceeds control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Rob Ellis
ARCADIS
430 First Avenue North, Ste 720
Minneapolis, MN US 55401

CADENA project ID: E200572
Project: FORD-Twin Cities Assembly Plant
Project number: DE000372.0003
Laboratory: TestAmerica - North Canton
Laboratory submittal: 59162-1
Sample date: 2015-12-15
Report received by CADENA: 2015-12-30
Initial Data Verification completed by CADENA: 2015-12-31

The following minor QC exceptions or missing information were noted:

GCMS VOC QC batch 211311 did not include MS recovery data due to insufficient sample volume available for spiking according to the laboratory submittal case narrative.

GCMS VOC QC batch 211311 method blank had detections below the RL for acetone and methylene chloride. Client sample -001 acetone result and client samples -001 and -002 methylene chloride results should be considered to be non-detect at the RL and qualified with a UB flag.

GCMS VOC QC batch 211311 LCS/LCSduplicate RPD was an outlier for methyl acetate. Qualification of client sample results was not required based on this QC outlier alone.

GCMS VOC/GRO trip blank had a detection below the RL for methylene chloride. Client sample results associated with these trip blank detections were already qualified based on method blank detections so no further qualification was required based on the trip blank detections.

GCMS SVOC sample -001 surrogate recoveries were diluted to below reliably quantifiable levels so were not used to qualify results.

GCMS SVOC sample -002 MS/MSD recoveries were outliers biased low for hexachlorobutadiene. Client sample -002 results for this analyte should be considered to be estimated and qualified with a UJ flag. MS or MSD recoveries but not both were outliers biased high for several PAH analytes and MS/MSD RPD only was an outlier for carbazole so qualification was not required based on these QC outliers alone.

WI-GRO and WI-DRO sample and batch QC did not include surrogate recovery or MS/MSD recovery information.

WI-DRO QC batch method blank had a detection below the RL. Qualification of client sample results was not required based on this method blank detection.

Metals method blanks had detections below the RL in QC batch 211510 for chromium, copper, nickel, potassium and arsenic and in QC batch 211321 for chromium and QC batch 211512 for mercury. Client sample -001 and -002 TCLP/SPLP copper and arsenic results and client sample -002 TCLP/SPLP chromium results should be considered to be non-detect at the RL and qualified with a UB flag and client samples -001 and -002 TCLP/SPLP potassium results non-detect at the concentration reported and qualified with a B flag.

Metals sample -001 MS/MSD recoveries for aluminum, barium, chromium, copper, iron, zinc and lead were not considered to be statistically reliable due to elevated levels of target analyte relative to the amount spiked (4X rule) so were not used to qualify results. MS or MSD recoveries but not both were outliers for antimony and lead so qualification was not required based on these QC outliers alone. MS and MSD recoveries were outliers biased low for calcium and manganese so these results should be considered to be estimated and qualified with J flags.

Metals QC batch 211510 MS recovery outliers were not determined using samples from this submittal so qualification of client sample results is not required based on these sample-specific QC outliers.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

2 Solid sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC VOC, GC Other, Metals and General Chemistry parameter(s). 1 Trip blank was analyzed for GCMS VOC and GRO parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-59175-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 12/16/2015 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.5º C.

TCLP VOLATILE ORGANIC COMPOUNDS (GCMS)

Sample AREA-C-TRENCH-1_015_5-6(20151215) (240-59175-1) was analyzed for TCLP volatile organic compounds (GCMS) in accordance with EPA SW-846 Methods 1311/8260B. The sample was leached on 12/18/2015 and analyzed on 12/21/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples AREA-C-TRENCH-1_015_5-6(20151215) (240-59175-1) and TRIP BLANK (240-59175-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 12/17/2015 and analyzed on 12/18/2015 and 12/19/2015.

Acetone was detected in method blank MB 240-211311/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Methylene Chloride was detected in method blank MB 240-211311/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Allyl chloride and Methyl acetate exceeded the RPD limit for LCSD 240-211311/3-A. Refer to the QC report for details.

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 240-211311 and analytical batch 240-211549 on these samples AREA-C-TRENCH-1_015_5-6(20151215) (240-59175-1) and TRIP BLANK (240-59175-2) .

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Sample AREA-C-TRENCH-1_015_5-6(20151215) (240-59175-1) was analyzed for TCLP semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Methods 1311/8270C. The sample was leached on 12/17/2015, prepared on 12/18/2015 and analyzed on

12/21/2015.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)
Sample AREA-C-TRENCH-1_015_5-6(20151215) (240-59175-1) was analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270C. The sample was prepared on 12/17/2015 and analyzed on 12/20/2015.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Hexachlorocyclopentadiene failed the recovery criteria low for the MS of sample 240-59162-2 in batch 240-211630.

For the MSD of sample 240-59162-2 in batch 240-211630, Hexachlorocyclopentadiene failed the recovery criteria low. Several analytes failed the recovery criteria high. Also, Carbazole exceeded the RPD limit.

Refer to the QC report for details.

Sample AREA-C-TRENCH-1_015_5-6(20151215) (240-59175-1)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

WISCONSIN GRO
Samples AREA-C-TRENCH-1_015_5-6(20151215) (240-59175-1) and TRIP BLANK (240-59175-2) were analyzed for Wisconsin GRO in accordance with Wisconsin DNR Modified GRO. The sample was prepared and analyzed on 12/18/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

WISCONSIN DRO
Sample AREA-C-TRENCH-1_015_5-6(20151215) (240-59175-1) was analyzed for Wisconsin DRO in accordance with Wisconsin DNR Modified DRO. The sample was prepared on 12/18/2015 and analyzed on 12/22/2015.

WI Diesel Range Organics (C10-C28) was detected in method blank MB 240-211439/5-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Sample AREA-C-TRENCH-1_015_5-6(20151215) (240-59175-1)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method(s) WI-DRO: Significant peaks, readily distinguished from background, were detected in the following samples within five minutes after the end of the analytical window defined by the last component eluting in the WI Diesel Range Organics (C10-C28) mix : AREA-C-TRENCH-1_015_5-6(20151215) (240-59175-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP METALS (ICP)
Sample AREA-C-TRENCH-1_015_5-6(20151215) (240-59175-1) was analyzed for TCLP metals (ICP) in accordance with EPA SW-846 Methods 1311/6010B. The sample was leached on 12/17/2015, prepared on 12/18/2015 and analyzed on 12/22/2015.

Potassium was detected in method blank MB 240-211510/2-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Arsenic, Chromium, Copper, Nickel and Potassium were detected in method blank LB 240-211400/1-B at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Calcium failed the recovery criteria low for the MSD of sample AREA-C-TRENCH-1_015_5-6(20151215)MSD (240-59175-1) in batch 240-211881. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL METALS (ICP)
Sample AREA-C-TRENCH-1_015_5-6(20151215) (240-59175-1) was analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The sample was prepared on 12/17/2015 and analyzed on 12/18/2015.

Chromium was detected in method blank MB 240-211321/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Several analytes failed the recovery criteria low for the MS of sample 240-59162-1 in batch 240-211528. Aluminum, Chromium, Copper and Zinc failed the recovery criteria high.

For the MSD of sample 240-59162-1 in batch 240-211528, Barium, Calcium, Iron and Manganese failed the recovery criteria low. Several analytes failed the recovery criteria high. Also, Barium and Iron exceeded the RPD limit.

Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP MERCURY
Sample AREA-C-TRENCH-1_015_5-6(20151215) (240-59175-1) was analyzed for TCLP mercury in accordance with EPA SW-846 Methods 1311/7470A. The sample was leached on 12/17/2015, prepared on 12/18/2015 and analyzed on 12/21/2015.

Mercury was detected in method blank LB 240-211400/1-C at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY
Sample AREA-C-TRENCH-1_015_5-6(20151215) (240-59175-1) was analyzed for total mercury in accordance with EPA SW-846 Method 7471A. The sample was prepared on 12/17/2015 and analyzed on 12/18/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HEXAVALENT CHROMIUM
Sample AREA-C-TRENCH-1_015_5-6(20151215) (240-59175-1) was analyzed for hexavalent chromium in accordance with EPA SW-846 Method 3060A/7196A. The sample was prepared on 12/23/2015 and analyzed on 12/24/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TRIVALENT CHROMIUM
Sample AREA-C-TRENCH-1_015_5-6(20151215) (240-59175-1) was analyzed for trivalent chromium in accordance with EPA SW-846 Method 7196A_CR3. The sample was analyzed on 12/22/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS
Sample AREA-C-TRENCH-1_015_5-6(20151215) (240-59175-1) was analyzed for percent solids in accordance with EPA Method 160.3 MOD. The sample was analyzed on 12/16/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DATA REPORTING QUALIFIERS

Client: ARCADIS U.S., Inc. Job Number: 240-59175-1

Lab Section	Qualifier	Description
GC/MS VOA		
	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	*	RPD of the LCS and LCSD exceeds the control limits
GC/MS Semi VOA		
	F1	MS and/or MSD Recovery is outside acceptance limits.
	F2	MS/MSD RPD exceeds control limits
	E	Result exceeded calibration range.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC Semi VOA		
	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
Metals		
	B	Compound was found in the blank and sample.
	F1	MS and/or MSD Recovery is outside acceptance limits.
	4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
	F2	MS/MSD RPD exceeds control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Minneapolis, MN US 55401

CADENA project ID: E200572
Project: FORD-Twin Cities Assembly Plant
Project number: DE000372.0003
Laboratory: TestAmerica - North Canton
Laboratory submittal: 59175-1
Sample date: 2015-12-15
Report received by CADENA: 2015-12-30
Initial Data Verification completed by CADENA: 2015-12-31

The following minor QC exceptions or missing information were noted:

GCMS VOC QC batch 211311 did not include MS recovery data due to insufficient sample volume available for spiking according to the laboratory submittal case narrative.

GCMS VOC QC batch 211311 method blank had detections below the RL for acetone and methylene chloride. Client sample -001 methylene chloride result should be considered to be non-detect at the RL and qualified with a UB flag.

GCMS VOC QC batch 211311 LCS/LCSduplicate RPD was an outlier for methyl acetate. Qualification of client sample results was not required based on this QC outlier alone.

GCMS VOC/GRO trip blank had a detection below the RL for methylene chloride. Client sample results associated with these trip blank detections were already qualified based on method blank detections so no further qualification was required based on the trip blank detections.

GCMS SVOC QC batch 211212 MS recovery outliers were not determined using samples from this submittal so qualification of client sample results is not required based on these sample-specific QC outliers.

WI-GRO and WI-DRO sample and batch QC did not include surrogate recovery or MS/MSD recovery information.

WI-DRO QC batch method blank had a detection below the RL. Qualification of client sample results was not required based on this method blank detection.

Metals method blanks had detections below the RL in QC batch 211510 for chromium, copper, nickel, potassium and arsenic and in QC batch 211321 for chromium and QC batch 211512 for mercury. Client sample -001 TCLP/SPLP chromium, copper and arsenic results should be considered to be non-detect at the RL and qualified with a UB flag and client sample -001 TCLP/SPLP potassium results non-detect at the concentration reported and qualified with a B flag.

Metals sample -001 MS/MSD recoveries calcium and manganese were not considered to be statistically reliable due to elevated levels of target analyte relative to the amount spiked (4X rule) so were not used to qualify results.

Metals QC batch 211311 MS recovery outliers were not determined using samples from this submittal so qualification of client sample results is not required based on these sample-specific QC outliers.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

1 Solid sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC VOC, GC Other, Metals and General Chemistry parameter(s). 1 Trip blank was analyzed for GCMS VOC and GRO parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

SAMPLING AND ANALYSIS SUMMARY

12/30/2015

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-59228-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT
The samples were received on 12/17/2015 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.5º C.

TCLP VOLATILE ORGANIC COMPOUNDS (GCMS)
Sample AREA C-TRENCH-5_00_3-4 (20151216) (240-59228-1) was analyzed for TCLP volatile organic compounds (GCMS) in accordance with EPA SW-846 Methods 1311/8260B. The sample was leached on 12/18/2015 and analyzed on 12/21/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GCMS)
Samples AREA C-TRENCH-5_00_3-4 (20151216) (240-59228-1) and MB-01 (20151216) (240-59228-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The sample was prepared on 12/17/2015 and analyzed on 12/22/2015.

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 240-211406 and analytical batch 240-211919 on these samples AREA C-TRENCH-5_00_3-4 (20151216) (240-59228-1) and MB-01 (20151216) (240-59228-2) .

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)
Sample AREA C-TRENCH-5_00_3-4 (20151216) (240-59228-1) was analyzed for TCLP semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Methods 1311/8270C. The sample was leached on 12/21/2015, prepared on 12/22/2015 and analyzed on 12/24/2015.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

3 & 4 Methylphenol failed the recovery criteria low for the MS of sample 240-59183-3 in batch 240-212275.

Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)
Sample AREA C-TRENCH-5_00_3-4 (20151216) (240-59228-1) was analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270C. The sample was prepared on 12/18/2015 and analyzed on 12/21/2015.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Isophorone was detected in method blank MB 240-211448/17-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

2,4-Dinitrophenol, 4,6-Dinitro-2-methylphenol and Hexachlorocyclopentadiene failed the recovery criteria low for the MS of sample AREA C-TRENCH-5_00_3-4 (20151216)MS (240-59228-1) in batch 240-211747.

2,4-Dinitrophenol, 4,6-Dinitro-2-methylphenol and Hexachlorocyclopentadiene failed the recovery criteria low for the MSD of sample AREA C-TRENCH-5_00_3-4 (20151216)MSD (240-59228-1) in batch 240-211747. 2,4,6-Trichlorophenol exceeded the RPD limit.

Refer to the QC report for details.

Method(s) 8270C: The following samples were diluted due to the nature of the sample matrix: (240-59183-A-3-E) and (240-59183-A-3-F MS). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

WISCONSIN GRO
Samples AREA C-TRENCH-5_00_3-4 (20151216) (240-59228-1) and MB-01 (20151216) (240-59228-2) were analyzed for Wisconsin GRO in accordance with Wisconsin DNR Modified GRO. The samples were prepared and analyzed on 12/18/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

WISCONSIN DRO
Sample AREA C-TRENCH-5_00_3-4 (20151216) (240-59228-1) was analyzed for Wisconsin DRO in accordance with Wisconsin DNR Modified DRO. The sample was prepared on 12/18/2015 and analyzed on 12/22/2015.

WI Diesel Range Organics (C10-C28) was detected in method blank MB 240-211439/5-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Method(s) WI-DRO: Significant peaks, readily distinguished from background, were detected in the following samples within five minutes after the end of the analytical window defined by the last component eluting in the WI Diesel Range Organics (C10-C28) mix : AREA C-TRENCH-5_00_3-4 (20151216) (240-59228-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP METALS (ICP)
Sample AREA C-TRENCH-5_00_3-4 (20151216) (240-59228-1) was analyzed for TCLP metals (ICP) in accordance with EPA SW-846 Methods 1311/6010B. The sample was leached on 12/21/2015, prepared on 12/22/2015 and analyzed on 12/23/2015.

Chromium, Manganese and Potassium were detected in method blank MB 240-211944/2-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Several analytes were detected in method blank LB 240-211830/1-B at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Zinc failed the recovery criteria low for the MSD of sample 240-59183-4 in batch 240-212146. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL METALS (ICP)
Sample AREA C-TRENCH-5_00_3-4 (20151216) (240-59228-1) was analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The sample was prepared on 12/18/2015 and analyzed on 12/21/2015.

Chromium, Magnesium, Potassium, Sodium and Vanadium were detected in method blank MB 240-211543/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the

associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Antimony failed the recovery criteria low for the MS of sample AREA C-TRENCH-5_00_3-4 (20151216)MS (240-59228-1) in batch 240-211881. Aluminum, Calcium, Iron and Manganese failed the recovery criteria high.

For the MSD of sample AREA C-TRENCH-5_00_3-4 (20151216)MSD (240-59228-1) in batch 240-211881, Antimony, Calcium and Manganese failed the recovery criteria low. Aluminum and Iron failed the recovery criteria high. Also, Calcium exceeded the RPD limit.

Refer to the QC report for details.

Method(s) 6010B: The continuing calibration verification (CCV) associated with batch 212146 recovered above the upper control limit for aluminum, chromium, iron, thallium and zinc. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following sample is impacted: AREA C-TRENCH-5_00_3-4 (20151216) (240-59228-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP MERCURY

Sample AREA C-TRENCH-5_00_3-4 (20151216) (240-59228-1) was analyzed for TCLP mercury in accordance with EPA SW-846 Methods 1311/7470A. The sample was leached on 12/21/2015, prepared on 12/22/2015 and analyzed on 12/23/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY

Sample AREA C-TRENCH-5_00_3-4 (20151216) (240-59228-1) was analyzed for total mercury in accordance with EPA SW-846 Method 7471A. The sample was prepared on 12/18/2015 and analyzed on 12/21/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HEXAVALENT CHROMIUM

Sample AREA C-TRENCH-5_00_3-4 (20151216) (240-59228-1) was analyzed for hexavalent chromium in accordance with EPA SW-846 Method 3060A/7196A. The sample was prepared on 12/23/2015 and analyzed on 12/24/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TRIVALENT CHROMIUM

Sample AREA C-TRENCH-5_00_3-4 (20151216) (240-59228-1) was analyzed for trivalent chromium in accordance with EPA SW-846 Method 7196A_CR3. The sample was analyzed on 12/27/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Sample AREA C-TRENCH-5_00_3-4 (20151216) (240-59228-1) was analyzed for percent solids in accordance with EPA Method 160.3 MOD. The sample was analyzed on 12/21/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DATA REPORTING QUALIFIERS

Client: ARCADIS U.S., Inc. Job Number: 240-59228-1

Lab Section	Qualifier	Description
GC/MS VOA		
	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC/MS Semi VOA		
	B	Compound was found in the blank and sample.
	F1	MS and/or MSD Recovery is outside acceptance limits.
	F2	MS/MSD RPD exceeds control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC Semi VOA		
	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
Metals		
	B	Compound was found in the blank and sample.
	^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
	F1	MS and/or MSD Recovery is outside acceptance limits.
	4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
	F2	MS/MSD RPD exceeds control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Rob Ellis
ARCADIS
430 First Avenue North, Ste 720
Minneapolis, MN US 55401

CADENA project ID: E200572
Project: FORD-Twin Cities Assembly Plant
Project number: DE000372.0003
Laboratory: TestAmerica - North Canton
Laboratory submittal: 59228-1
Sample date: 2015-12-16
Report received by CADENA: 2015-12-30
Initial Data Verification completed by CADENA: 2015-12-31

The following minor QC exceptions or missing information were noted:

GCMS VOC QC batch 211406 did not include MS recovery data due to insufficient sample volume available for spiking according to the laboratory submittal case narrative.

GCMS SVOC QC batch 211448 method blank had a detection below the RL for isophorone. Client sample -001 result for this analyte should be considered to be non-detect at the RL and qualified with a UB flag.

GCMS SVOC sample -001 MS/MSD recoveries were outliers biased low for 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol and hexachlorocyclopentadiene. Client sample -001 results for these analytes should be considered to be estimated and qualified with UJ flags. MS/MSD RPD outlier only for 2,4,6-trichlorophenol did not require qualification of client sample results.

WI-GRO and WI-DRO sample and batch QC did not include surrogate recovery or MS/MSD recovery information.

WI-DRO QC batch method blank had a detection below the RL. Qualification of client sample results was not required based on this method blank detection.

Metals method blanks had detections below the RL in QC batch 211543 for chromium, magnesium, sodium, potassium and vanadium and in QC batch 211944 for chromium, cobalt, magnesium, nickel, potassium and lead. Client sample -001 total sodium results should be considered to be non-detect at the RL and qualified with a UB flag.

Metals sample -001 MS/MSD recoveries were outliers biased low for total antimony. Client sample -001 total antimony results should be considered to be estimated and qualified with a J flag. MS/MSD recoveries for aluminum, calcium, iron and magnesium were not considered to be statistically reliable due to elevated levels of target analyte relative to the amount spiked (4X rule) so were not used to qualify results.

Metals QC batch 211944 MS recovery outliers were not determined using samples from this submittal so qualification of client sample results is not required based on these sample-specific QC outliers.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

2 Solid sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC VOC, GC Other, Metals and General Chemistry parameter(s).

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-59286-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT
The samples were received on 12/18/2015 10:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.2º C.

TCLP VOLATILE ORGANIC COMPOUNDS (GCMS)
Sample AREAC-TRENCH-4_015_7-8(20151217) (240-59286-1) was analyzed for TCLP volatile organic compounds (GCMS) in accordance with EPA SW-846 Methods 1311/8260B. The samples were leached on 12/18/2015 and analyzed on 12/21/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GCMS)
Samples AREAC-TRENCH-4_015_7-8(20151217) (240-59286-1), HA-21_0-1(20151217) (240-59286-2) and MB (240-59286-4) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 12/21/2015 and analyzed on 12/22/2015.

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 240-211741 and analytical batch 240-211919 on these samples AREAC-TRENCH-4_015_7-8(20151217) (240-59286-1), HA-21_0-1(20151217) (240-59286-2) and MB (240-59286-4) .

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)
Sample AREAC-TRENCH-4_015_7-8(20151217) (240-59286-1) was analyzed for TCLP semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Methods 1311/8270C. The sample was leached on 12/21/2015, prepared on 12/22/2015 and analyzed on 12/24/2015.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

3 & 4 Methylphenol failed the recovery criteria low for the MS of sample 240-59183-3 in batch 240-212275. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)
Samples AREAC-TRENCH-4_015_7-8(20151217) (240-59286-1) and HA-21_0-1(20151217) (240-59286-2) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 12/21/2015 and analyzed on 12/23/2015.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Bis(2-ethylhexyl) phthalate was detected in method blank MB 240-211698/10-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Method(s) 8270C: The continuing calibration verification (CCV) associated with batch 212122 recovered above the upper control limit for Di-n-octyl phthalate. The samples associated with this CCV were non-detect for the affected analyte; therefore, the data have been reported. The following samples are impacted: AREAC-TRENCH-4_015_7-8(20151217) (240-59286-1) and HA-21_0-1(20151217) (240-59286-2).

Method(s) 8270C: The following samples were diluted due to the nature of the sample matrix: (240-59183-A-3-E) and (240-59183-A-3-F MS). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

WISCONSIN GRO
Samples AREAC-TRENCH-4_015_7-8(20151217) (240-59286-1), HA-21_0-1(20151217) (240-59286-2) and MB (240-59286-4) were analyzed for Wisconsin GRO in accordance with Wisconsin DNR Modified GRO. The samples were prepared and analyzed on 12/29/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

WISCONSIN DRO
Samples AREAC-TRENCH-4_015_7-8(20151217) (240-59286-1) and HA-21_0-1(20151217) (240-59286-2) were analyzed for Wisconsin DRO in accordance with Wisconsin DNR Modified DRO. The samples were prepared on 12/24/2015 and analyzed on 01/05/2016.

WI Diesel Range Organics (C10-C28) was detected in method blank MB 240-212286/3-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Method(s) WI-DRO: Significant peaks, readily distinguished from background, were detected in the following samples within five minutes after the end of the analytical window defined by the last component eluting in the Diesel Range Organics (DRO) mix: AREAC-TRENCH-4_015_7-8(20151217) (240-59286-1) and HA-21_0-1(20151217) (240-59286-2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP METALS (ICP)
Sample AREAC-TRENCH-4_015_7-8(20151217) (240-59286-1) was analyzed for TCLP metals (ICP) in accordance with EPA SW-846 Methods 1311/6010B. The sample was leached on 12/21/2015, prepared on 12/22/2015 and analyzed on 12/23/2015.

Chromium, Manganese and Potassium were detected in method blank MB 240-211944/2-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Several analytes were detected in method blank LB 240-211830/1-B at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Zinc failed the recovery criteria low for the MSD of sample 240-59183-4 in batch 240-212146. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL METALS (ICP)
Samples AREAC-TRENCH-4_015_7-8(20151217) (240-59286-1) and HA-21_0-1(20151217) (240-59286-2) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 12/21/2015 and analyzed on 12/22/2015 and 12/24/2015.

Barium, Manganese, Nickel, Potassium and Zinc were detected in method blank MB 240-211769/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Several analytes were detected in method blank MB 240-211798/1-A at levels that were above the method detection limit but below the reporting limit. The values should be

considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Antimony, Iron and Magnesium failed the recovery criteria low for the MS of sample AREAC-TRENCH-4_015_7-8(20151217)MS (240-59286-1) in batch 240-212068. Aluminum, Calcium and Manganese failed the recovery criteria high.

Antimony failed the recovery criteria low for the MSD of sample AREAC-TRENCH-4_015_7-8(20151217)MSD (240-59286-1) in batch 240-212068. Aluminum, Calcium and Manganese failed the recovery criteria high.

Antimony, Manganese and Iron failed the recovery criteria low for the MS of sample HA-21_0-1(20151217)MS (240-59286-2) in batch 240-212434. Aluminum failed the recovery criteria high.

For the MSD of sample HA-21_0-1(20151217)MSD (240-59286-2) in batch 240-212434, Antimony failed the recovery criteria low. Several analytes failed the recovery criteria high. Also, Calcium, Magnesium and Manganese exceeded the RPD limit.

Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP MERCURY

Sample AREAC-TRENCH-4_015_7-8(20151217) (240-59286-1) was analyzed for TCLP mercury in accordance with EPA SW-846 Methods 1311/7470A. The sample was leached on 12/21/2015, prepared on 12/22/2015 and analyzed on 12/23/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY

Sample AREAC-TRENCH-4_015_7-8(20151217) (240-59286-1) was analyzed for total mercury in accordance with EPA SW-846 Method 7471A. The sample was prepared on 12/21/2015 and analyzed on 12/22/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples AREAC-TRENCH-4_015_7-8(20151217) (240-59286-1) and HA-21_0-1(20151217) (240-59286-2) were analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 12/18/2015.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DATA REPORTING QUALIFIERS

Client: ARCADIS U.S., Inc. Job Number: 240-59286-1

Lab Section	Qualifier	Description
GC/MS VOA		
	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	*	RPD of the LCS and LCSD exceeds the control limits
GC/MS Semi VOA		
	B	Compound was found in the blank and sample.
	F1	MS and/or MSD Recovery is outside acceptance limits.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC VOA		
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC Semi VOA		
	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
Metals		
	B	Compound was found in the blank and sample.
	F1	MS and/or MSD Recovery is outside acceptance limits.
	4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
	F2	MS/MSD RPD exceeds control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Minneapolis, MN US 55401

CADENA project ID: E200572
Project: FORD-Twin Cities Assembly Plant
Project number: DE000372.0003
Laboratory: TestAmerica - North Canton
Laboratory submittal: 59286-1
Sample date: 2015-12-17
Report received by CADENA: 2016-01-06
Initial Data Verification completed by CADENA: 2016-01-06

The following minor QC exceptions or missing information were noted:

GCMS VOC QC batch 211741 did not include MS recovery data due to insufficient sample volume available for QC samples according to the laboratory submittal case narrative.

GCMS SVOC QC batch 211698 method blank had a detection below the RL for bis-2-ethylhexylphthalate. Client samples -001 and -002 results for this analyte should be considered to be non-detect at the RL and qualified with UB flags.

WI-GRO and WI-DRO results did not include surrogate recovery data and QC batch did not include MS recovery data.

WI-DRO QC batch method blank had a detection below the RL. Client sample -001 DRO results should be considered to be non-detect at the RL and qualified with a UB flag.

Metals method blanks had detections below the RL in QC batch 211769 for barium, manganese, nickel, potassium and zinc and in QC batch 211798 for calcium, chromium, magnesium, manganese, sodium, nickel, zinc and iron and in QC batch 211944 for chromium, cobalt, manganese, nickel, potassium and lead. Client sample -001 TCLP/SPLP lead result should be considered to be non-detect at the RL and qualified with a UB flag.

Metals sample -001 MS/MSD recoveries were outliers biased low for antimony and biased high for calcium. Client sample -001 antimony and calcium results should be considered to be estimated and qualified with J flags if detected and UJ flags if non-detect. MS or MSD recoveries but not both were outliers biased low for magnesium so qualification was not required based on this QC outlier alone. MS/MSD recoveries were not considered to be statistically reliable due to elevated levels of target analyte in the original sample matrix relative to the amount spiked (4X rule) so were not used to qualify client sample results for aluminum, iron and manganese.

Metals sample -002 MS/MSD recoveries were outliers biased low for antimony and biased high along with the MS/MSD RPD for magnesium. Client sample -002 antimony and magnesium results should be considered to be estimated and qualified with J flags if detected and UJ flags if non-detect. MS/MSD recoveries were not considered to be statistically reliable due to elevated levels of target analyte in the original sample matrix relative to the amount spiked (4X rule) so were not used to qualify client sample results for aluminum, calcium, iron and manganese.

Metals QC batch 211944 MS recovery outliers were not determined using samples from this submittal so qualification was not required based on these sample-specific QC outliers.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

3 Solid sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC VOC, GC Other and Metals parameter(s).

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

denise.pohl@testamericainc.com
12/30/2015

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

Job Narrative
240-59294-1

Comments
The Asbestos analysis was performed at the EMLab P&K San Francisco laboratory.

Receipt
The sample was received on 12/18/2015 10:00 AM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.2º C.

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Dr. Kamashwaran Ramanathan

Dates of Analysis:
Asbestos PLM: 12-24-2015

Service SOPs: Asbestos PLM (EPA Methods 600/R-93/116 & 600/M4-82-020, SOP EM-AS-S-1267)

All samples were received in acceptable condition unless noted in the Report Comments portion in the body of the report. The results relate only to the items tested. The results include an inherent uncertainty of measurement associated with estimating percentages by polarized light microscopy. Measurement uncertainty data for sample results with >1% asbestos concentration can be provided when requested.

EMLab P&K ("the Company") shall have no liability to the client or the client's customer with respect to decisions or recommendations made, actions taken or courses of conduct implemented by either the client or the client's customer as a result of or based upon the Test Results. In no event shall the Company be liable to the client with respect to the Test Results except for the Company's own willful misconduct or gross negligence nor shall the Company be liable for incidental or consequential damages or lost profits or revenues to the fullest extent such liability may be disclaimed by law, even if the Company has been advised of the possibility of such damages, lost profits or lost revenues. In no event shall the Company's liability with respect to the Test Results exceed the amount paid to the Company by the client therefor.

Total Samples Submitted:	1
Total Samples Analyzed:	1
Total Samples with Layer Asbestos Content > 1%:	0

Location: AREAC-TRENCH-1_010_4-5 (20151217) (240-59294-1) Lab ID-Version‡: 6799562-1

Sample Layers	Asbestos Content
Black Semi-Fibrous Material	ND
Composite Non-Asbestos Content:	20% Glass Fibers 15% Cellulose
Sample Composite Homogeneity:	Moderate

The test report shall not be reproduced except in full, without written approval of the laboratory. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government. EMLab P&K reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified.

Inhomogeneous samples are separated into homogeneous subsamples and analyzed individually. ND means no fibers were detected. When detected, the minimum detection and reporting limit is less than 1% unless point counting is performed. Floor tile samples may contain large amounts of interference material and it is recommended that the sample be analyzed by gravimetric point count analysis to lower the detection limit and to aid in asbestos identification.
‡ A "Version" indicated by -"x" after the Lab ID# with a value greater than 1 indicates a sample with amended data. The revision number is reflected by the value of "x".

CADENA project ID: E200572
Project: FORD-Twin Cities Assembly Plant
Project number: DE000372.0003
Laboratory: TestAmerica - North Canton (subcontracted to EMLab P&K San Bruno
Laboratory submittal: 59294-1
Sample date: 2015-12-17
Report received by CADENA: 2015-12-30
Initial Data Verification completed by CADENA: 2015-12-31

1 Solid sample was analyzed for asbestos parameters.

There were no significant QC anomalies or exceptions to report.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-59932-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

The USEPA 600 Method was performed at the EMLab P&K San Bruno Laboratory.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 1/14/2016 10:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 3.2º C, 3.4º C and 3.7º C.

TCLP VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1), AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4) and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5) were analyzed for TCLP volatile organic compounds (GCMS) in accordance with EPA SW-846 Methods 1311/8260B. The samples were leached on 01/20/2016 and analyzed on 01/21/2016.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1), AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4), AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5) and TRIP BLANK (240-59932-7) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 01/15/2016 and analyzed on 01/18/2016 and 01/19/2016.

2-Butanone (MEK) was detected in method blank MB 240-214307/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Tetrahydrofuran was detected in method blank MB 240-214307/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

1,2-Dichloroethane-d4 (Surr), 4-Bromofluorobenzene (Surr), Dibromofluoromethane (Surr) and Toluene-d8 (Surr) failed the surrogate recovery criteria high for AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5). Refer to the QC report for details.

Samples AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1)[500X], AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2)[4X], AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3)[1000X] and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5)[100X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 240-214307 and analytical batch 240-214411 on these samples: AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4), and TRIP BLANK (240-59932-7).

Method(s) 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate/sample duplicate (MS/MSD/DUP) associated with preparation batch 240-214307 and analytical batch 240-214576 on these samples: AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1), and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1), AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4) and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5) were analyzed for TCLP semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Methods 1311/8270C. The samples were leached on 01/21/2016, prepared on 01/22/2016 and analyzed on 01/25/2016 and 01/26/2016.

Pyridine was detected in method blank MB 240-215157/15-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Hexachloroethane failed the recovery criteria high for the MS of sample AREA C-TRENCH-2_015_6-7 (20160112)MS (240-59932-1) in batch 240-215372. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1), AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4) and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 01/18/2016 and analyzed on 01/20/2016 and 01/21/2016.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

2,4,6-Tribromophenol (Surr), 2-Fluorobiphenyl (Surr), 2-Fluorophenol (Surr), Nitrobenzene-d5 (Surr), Phenol-d5 (Surr) and Terphenyl-d14 (Surr) failed the surrogate recovery criteria low for AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3) and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5). Refer to the QC report for details.

Samples AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1)[50X], AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2) [100X], AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3)[200X], AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4)[25X] and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5)[400X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method(s) 3540C: Due to the matrix, the following samples could not be concentrated to the final method required volume: AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3) and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5). The reporting limits (RLs) are elevated proportionately.

Method(s) 8270C: The continuing calibration verification (CCV) associated with batch 214706 recovered above the upper control limit for N-Nitrosodiphenylamine. The samples associated with this CCV was non-detect for the affected analyte; therefore, the data have been reported. The following sample is impacted: AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5).

Method(s) 8270C: The continuing calibration verification (CCV) associated with batch 214903 recovered above the upper control limit for N-Nitrosodiphenylamine and Pentachlorophenol. The samples associated with this CCV was non-detect for the affected analytes; therefore, the data have been reported. The following samples are impacted: AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1), AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), and AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4).

Method(s) 8270C: The following samples were diluted due to the nature of the sample matrix: AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5), and (240-59932-J-1-G MS). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

WISCONSIN GRO

Samples AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1), AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4), AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5) and TRIP BLANK (240-59932-7) were analyzed for Wisconsin GRO in accordance with Wisconsin DNR Modified GRO. The samples were prepared on 01/19/2016 and analyzed on 01/20/2016.

Samples AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1)[200X], AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2) [10X], AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3)[200X] and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5)[50X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DIESEL RANGE ORGANICS (DRO)

Sample AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1) was analyzed for diesel range organics (DRO) in accordance with EPA SW-846 Method 8015B - DRO. The sample was prepared on 01/19/2016 and analyzed on 01/22/2016.
Sample was analyzed for 8015B - DRO due to sample received was overweight for WI DRO.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

Sample AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1)[100X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

WISCONSIN DRO

Samples AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4) and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5) were analyzed for Wisconsin DRO in accordance with Wisconsin DNR Modified DRO. The samples were prepared on 01/19/2016 and analyzed on 01/22/2016.

WI Diesel Range Organics (C10-C28) was detected in method blank MB 240-214526/15-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Samples AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2)[50X], AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3) [200X], AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4)[50X] and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5)[200X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method(s) WI DRO PREP: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 240-214526.

Method(s) WI DRO PREP: Due to the matrix, the following samples could not be concentrated to the final method required volume: AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5). The reporting limits (RLs) are elevated proportionately.

Method(s) WI-DRO: Significant peaks, readily distinguished from background, were detected in the following samples within five minutes after the end of the analytical window defined by the last component eluting in the WI Diesel Range Organics (C10-C28) mix : AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4), and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP METALS (ICP)

Samples AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1), AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4) and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5) were analyzed for TCLP metals (ICP) in accordance with EPA SW-846 Methods 1311/6010B. The samples were leached on 01/21/2016, prepared on 01/21/2016 and analyzed on 01/25/2016.

Several analytes were detected in method blank LB 240-215019/1-B at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Zinc failed the recovery criteria low for the MS/MSD of sample 240-59930-1 in batch 240-215388. Refer to the QC report for details.

Samples AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1)[2X], AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2)[10X], AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3)[5X] and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5)[10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Several analytes were detected in method blank MB 240-215033/2-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL METALS (ICP)

Samples AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1), AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4) and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 01/15/2016 and analyzed on 01/18/2016 and 01/19/2016.

Chromium, Iron, Magnesium and Manganese were detected in method blank MB 240-214287/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Calcium failed the recovery criteria low for the MS of sample AREA C-TRENCH-2_015_6-7 (20160112)MS (240-59932-1) in batch 240-214690. Several analytes failed the recovery criteria high.

For the MSD of sample AREA C-TRENCH-2_015_6-7 (20160112)MSD (240-59932-1) in batch 240-214690, Antimony, Barium and Lead failed the recovery criteria low. Several analytes failed the recovery criteria high. Also, Aluminum, Antimony, Chromium and Lead exceeded the RPD limit.

Refer to the QC report for details.

Samples AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1)[5X], AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2)[5X], AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3)[100X] and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5)[20X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP MERCURY

Samples AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1), AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4) and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5) were analyzed for TCLP mercury in accordance with EPA SW-846 Methods 1311/7470A. The samples were leached on 01/21/2016, prepared on 01/22/2016 and analyzed on 01/25/2016.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY

Samples AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1), AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4) and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5) were analyzed for total mercury in accordance with EPA SW-846 Method 7471A. The samples were prepared on 01/15/2016 and analyzed on 01/18/2016.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HEXAVALENT CHROMIUM

Samples AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1), AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4) and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5) were analyzed for hexavalent chromium in accordance with EPA SW-846 Method 3060A/7196A. The samples were prepared on 01/19/2016 and analyzed on 01/20/2016.

Samples AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3)[20X] and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5) [20X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TRIVALENT CHROMIUM

Samples AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1), AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4) and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5) were analyzed for trivalent chromium in accordance with EPA SW-846 Method 7196A_CR3. The samples were analyzed on 01/19/2016.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS

Samples AREA C-TRENCH-2_015_6-7 (20160112) (240-59932-1), AREA C-TRENCH-2_00_12-13 (20160112) (240-59932-2), AREA C-TRENCH-2_013_6-7 (20160112) (240-59932-3), AREA C-TRENCH-2_00_9-10 (20160112) (240-59932-4) and AREA C-TRENCH-2_08_4-5 (20160112) (240-59932-5) were analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 01/15/2016.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DATA REPORTING QUALIFIERS

Client: ARCADIS U.S., Inc. Job Number: 240-59932-1

Lab Section	Qualifier	Description
GC/MS VOA		
	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits
GC/MS Semi VOA		
	B	Compound was found in the blank and sample.
	F1	MS and/or MSD Recovery is outside acceptance limits.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits
GC VOA		
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC Semi VOA		
	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
Metals		
	B	Compound was found in the blank and sample.
	F1	MS and/or MSD Recovery is outside acceptance limits.
	4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
	F2	MS/MSD RPD exceeds control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Asbestos PLM: 01-21-2016

Service SOPs: Asbestos PLM (EPA Methods 600/R-93/116 & 600/M4-82-020, SOP EM-AS-S-1267)

All samples were received in acceptable condition unless noted in the Report Comments portion in the body of the report. The results relate only to the items tested. The results include an inherent uncertainty of measurement associated with estimating percentages by polarized light microscopy. Measurement uncertainty data for sample results with >1% asbestos concentration can be provided when requested.

EMLab P&K ("the Company") shall have no liability to the client or the client's customer with respect to decisions or recommendations made, actions taken or courses of conduct implemented by either the client or the client's customer as a result of or based upon the Test Results. In no event shall the Company be liable to the client with respect to the Test Results except for the Company's own willful misconduct or gross negligence nor shall the Company be liable for incidental or consequential damages or lost profits or revenues to the fullest extent such liability may be disclaimed by law, even if the Company has been advised of the possibility of such damages, lost profits or lost revenues. In no event shall the Company's liability with respect to the Test Results exceed the amount paid to the Company by the client therefor.

Total Samples Submitted:	1
Total Samples Analyzed:	1
Total Samples with Layer Asbestos Content > 1%:	0

Location: Area C-Trench-2_15_10-11 (20160113) (240-59932-6) Lab ID-Version‡: 6841955-1

Sample Layers	Asbestos Content
Brown Fibrous Material	ND
Composite Non-Asbestos Content:	99% Cellulose
Sample Composite Homogeneity:	Moderate

The test report shall not be reproduced except in full, without written approval of the laboratory. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government. EMLab P&K reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified.

Inhomogeneous samples are separated into homogeneous subsamples and analyzed individually. ND means no fibers were detected. When detected, the minimum detection and reporting limit is less than 1% unless point counting is performed. Floor tile samples may contain large amounts of interference material and it is recommended that the sample be analyzed by gravimetric point count analysis to lower the detection limit and to aid in asbestos identification.
‡ A "Version" indicated by -"x" after the Lab ID# with a value greater than 1 indicates a sample with amended data. The revision number is reflected by the value of "x".

Rob Ellis
ARCADIS
430 First Avenue North, Ste 720
Minneapolis, MN US 55401

CADENA project ID: E200572
Project: FORD-Twin Cities Assembly Plant
Project number: DE000372.0003
Laboratory: TestAmerica - North Canton (asbestos analysis subcontracted to EMLabP&K-San Bruno)
Laboratory submittal: 59932-1
Sample date: 2016-01-12
Report received by CADENA: 2016-01-27
Initial Data Verification completed by CADENA: 2016-01-29

The following minor QC exceptions or missing information were noted:

CCV response outliers for GCMS SVOC analytical batches 214706 and 214903 were not used to qualify field results as part of this level 2 data package verification review.

GCMS VOC QC batch 214307 and WI-DRO batch 214526 did not include MS recovery data due to insufficient sample volume available for QC samples according to the laboratory submittal case narrative.

GCMS VOC surrogate recoveries were diluted to below reliably quantifiable levels so were not used to qualify results for client samples -001total, -003total and -005total.

GCMS VOC QC batch 214607 method blank had detections below the RL for MEK and tetrahydrofuran. Qualifications based on these method blank detections were only applicable to the trip blank which was not qualified since it is being treated as a QC sample for the sake of this submittal.

GCMS VOC trip blank had detections below the RL for MEK and tetrahydrofuran. Client samples -002 and -003 MEK results should be considered to be non-detect at the RL and qualified with UB flags based on the trip blank detections.

GCMS SVOC QC batch 215157 method blank had a detection below the RL for TCLP/SPLP pyridine. Client samples -002 and -004 results for this analyte should be considered to be non-detect at the RL and qualified with UB flags.

GCMS SVOC surrogate recoveries were diluted to below reliably quantifiable levels so were not used to qualify results for client samples -003total and -005total.

GCMS SVOC sample -001 MS recovery was an outlier biased high for TCLP hexachloroethane. Qualification of client sample results was not required based on this high bias QC outlier.

WI-GRO and WI-DRO results did not include surrogate recovery data and QC batches did not include MS recovery data.

WI-DRO QC batch 214576 method blank had a detection below the RL. Qualification of client sample results was not required based on this method blank detection.

Metals method blanks had detections below the RL in QC batch 214287 for TOTAL chromium, manganese, iron and magnesium and in QC batch 215033 for calcium, chromium, magnesium, manganese, nickel, zinc, barium, arsenic, cadmium, potassium, cobalt and iron. Client sample -005 TCLP/SPLP arsenic and potassium results and client sample -001, -002, -004 TCLP/SPLP Chromium results should be considered to be non-detect at the RL and qualified with a UB flag.

Metals sample -001 MS/MSD recoveries were outliers biased low along with an MS/MSD RPD outlier for antimony and biased high along with an MS/MSD RPD outlier for chromium and biased high and low for calcium and biased high for manganese. Client sample -001 results for these analytes should be considered to be estimated and qualified with J flags if detected and UJ flags if non-detect. MS or MSD recoveries but not both were outliers biased high for cadmium so qualification was not required based on this QC outlier alone. MS/MSD recoveries were not considered to be statistically reliable due to elevated levels of target analyte in the original sample matrix relative to the amount spiked (4X rule) so were not used to qualify client sample results for barium, lead, aluminum, iron and zinc.

Metals QC batch 215033 MS recovery outliers were not determined using samples from this submittal so qualification was not required based on these sample-specific QC outliers.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

6 Solid sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC VOC, GC Other, Metals and General Chemistry parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters. 1 Solid sample was analyzed for asbestos parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

Qualifiers added during verification have been added to the electronic data which is available for download from the CADENA CLMS. Refer to the attached table of analytical results that have been qualified during verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

SAMPLING AND ANALYSIS SUMMARY

CADENA Project ID: E200572
Laboratory: TestAmerica-North Canton
Laboratory Submittal: 59932-1

Lab Sample ID	Sample ID	Collection Date (mm/yy/dd)	Collection Time (hh:mm:ss)	Volatile Organics by GCMS	Semivolatiles by GCMS	Wisconsin GRO Method	Non-Halogenated Cmpds by GC/FID	Wisconsin DRO Method	Metals by ICP Spectroscopy	Mercury (Manual Cold Vapor)	Mercury in Solid Waste	Chromium, Hexavalent (Colorimetric)

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of TestAmerica and its client. All questions regarding this report should be directed to the TestAmerica Project Manager who has signed this report.

CASE NARRATIVE

Client: ARCADIS U.S., Inc.

Project: Ford TCAP - E200572

Report Number: 240-59997-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 1/16/2016 9:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.6º C and 2.5º C.

TCLP VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1), AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2) and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3) were analyzed for TCLP volatile organic compounds (GCMS) in accordance with EPA SW-846 Methods 1311/8260B. The samples were leached on 01/25/2016 and analyzed on 01/26/2016 and 01/27/2016.

Carbon tetrachloride failed the recovery criteria low for the MS/MSD of sample 240-60024-6 in batch 240-215476. Trichloroethene failed the recovery criteria high. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1), AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2), AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3) and TRIP BLANK (240-59997-4) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 01/19/2016 and analyzed on 01/21/2016.

2-Butanone (MEK) was detected in method blank MB 240-214579/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Toluene was detected in method blank MB 240-214579/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

1,2-Dichloroethane-d4 (Surr) failed the surrogate recovery criteria low for AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2). 4-Bromofluorobenzene (Surr) failed the surrogate recovery criteria high. 1,2-Dichloroethane-d4 (Surr) failed the surrogate recovery criteria low for AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3). 4-Bromofluorobenzene (Surr) failed the surrogate recovery criteria high. Refer to the QC report for details.

Carbon disulfide exceeded the RPD limit for the MSD of sample 240-60024-3 in batch 240-214661. Refer to the QC report for details.

Samples AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2)[250X] and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3) [250X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method(s) 8260B: A MS/MSD was prepared for prep batch 214579, but was analyzed in a different analytical batch.

AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1), AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2), AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3) and TRIP BLANK (240-59997-4)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1), AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2) and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3) were analyzed for TCLP semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Methods 1311/8270C. The samples were leached on 01/25/2016, prepared on 01/26/2016 and analyzed on 01/28/2016.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

2-Methylphenol and 3 & 4 Methylphenol were detected in method blank MB 240-215452/11-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

SEMIVOLATILE ORGANIC COMPOUNDS (GCMS)

Samples AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1), AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2) and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3) were analyzed for semivolatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 01/18/2016 and analyzed on 01/22/2016.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

2,4,6-Tribromophenol (Surr), 2-Fluorobiphenyl (Surr), 2-Fluorophenol (Surr), Nitrobenzene-d5 (Surr), Phenol-d5 (Surr) and Terphenyl-d14 (Surr) failed the surrogate recovery criteria low for AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2) and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3). 2,4,6-Tribromophenol (Surr), 2-Fluorophenol (Surr), Nitrobenzene-d5 (Surr) and Phenol-d5 (Surr) failed the surrogate recovery criteria low for AREA C-TRENCH-3_07_3-4(20160114)MS (240-59997-3MS) and AREA C-TRENCH-3_07_3-4(20160114)MSD (240-59997-3MSD). Refer to the QC report for details.

Several analytes failed the recovery criteria low for the MS/MSD of sample AREA C-TRENCH-3_07_3-4(20160114)MS/MSD (240-59997-3) in batch 240-215094. Several analytes failed the recovery criteria high. Refer to the QC report for details.

Samples AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1)[50X], AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2)[200X] and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3)[25X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method(s) 8270C: The continuing calibration verification (CCV) associated with batch 215094 recovered above the upper control limit for Pentachlorophenol. The samples associated with this CCV were non-detect for the affected analyte; therefore, the data have been reported. The following samples are impacted: AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1), AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2) and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3).

Method(s) 8270C: The following samples were diluted due to the nature of the sample matrix: AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3), (240-59997-I-3-B MS) and (240-59997-I-3-C MSD). Elevated reporting limits (RLs) are provided.

Method(s) 3540C: Due to the matrix, the following samples could not be concentrated to the final method required volume: AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2), AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3), (240-59997-I-3 MS) and (240-59997-I-3 MSD). The reporting limits (RLs) are elevated proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

WISCONSIN GRO

Samples AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1), AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2), AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3) and TRIP BLANK (240-59997-4) were analyzed for Wisconsin GRO in accordance with Wisconsin DNR Modified GRO. The samples were prepared on 01/19/2016 and analyzed on 01/20/2016.

Samples AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2)[200X] and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3) [50X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

WISCONSIN DRO
Samples AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1), AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2) and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3) were analyzed for Wisconsin DRO in accordance with Wisconsin DNR Modified DRO. The samples were prepared on 01/19/2016 and analyzed on 01/22/2016.

WI Diesel Range Organics (C10-C28) was detected in method blank MB 240-214526/15-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Samples AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1)[50X], AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2)[200X] and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3)[100X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Method(s) WI-DRO: Significant peaks, readily distinguished from background, were detected in the following samples within five minutes after the end of the analytical window defined by the last component eluting in the WI Diesel Range Organics (C10-C28) mix : AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1), AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2) and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3).

Method(s) WI DRO PREP: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 240-214526.

Method(s) WI DRO PREP: Due to the matrix, the following sample could not be concentrated to the final method required volume: AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2). The reporting limits (RLs) are elevated proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP METALS (ICP)
Samples AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1), AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2) and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3) were analyzed for TCLP metals (ICP) in accordance with EPA SW-846 Methods 1311/6010B. The samples were leached on 01/25/2016, prepared on 01/26/2016 and analyzed on 01/27/2016 and 01/28/2016.

Several analytes were detected in method blank LB 240-215328/1-B at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Zinc failed the recovery criteria low for the MS/MSD of sample AREA C-TRENCH-3_010_9-10(20160114)MS/MSD (240-59997-2) in batch 240-215745. Refer to the QC report for details.

Samples AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1)[5X] and AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2) [10X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Several analytes were detected in method blank MB 240-215399/2-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL METALS (ICP)
Samples AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1), AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2) and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 01/19/2016 and analyzed on 01/20/2016.

Cadmium, Magnesium, Nickel and Vanadium were detected in method blank MB 240-214580/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged. Refer to the QC report for details.

Several analytes failed the recovery criteria low for the MS of sample AREA C-TRENCH-3_022_2-3(20160114)MS (240-59997-1) in batch 240-214773. Aluminum and Iron failed the recovery criteria high.

For the MSD of sample AREA C-TRENCH-3_022_2-3(20160114)MSD (240-59997-1) in batch 240-214773, Several analytes failed the recovery criteria low. Aluminum failed the recovery criteria high. Also, Several analytes exceeded the RPD limit.

Refer to the QC report for details.

Samples AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1)[5X], AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2)[20X] and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3)[20X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TCLP MERCURY
Samples AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1), AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2) and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3) were analyzed for TCLP mercury in accordance with EPA SW-846 Methods 1311/7470A. The samples were leached on 01/25/2016, prepared on 01/26/2016 and analyzed on 01/27/2016.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL MERCURY
Samples AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1), AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2) and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3) were analyzed for total mercury in accordance with EPA SW-846 Method 7471A. The samples were prepared on 01/19/2016 and analyzed on 01/21/2016.

Mercury failed the recovery criteria high for the MSD of sample AREA C-TRENCH-3_022_2-3(20160114)MSD (240-59997-1) in batch 240-214938. Refer to the QC report for details.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HEXAVALENT CHROMIUM
Samples AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1), AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2) and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3) were analyzed for hexavalent chromium in accordance with EPA SW-846 Method 3060A/7196A. The samples were prepared on 01/19/2016 and analyzed on 01/20/2016.

Samples AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2)[5X] and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TRIVALENT CHROMIUM
Samples AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1), AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2) and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3) were analyzed for trivalent chromium in accordance with EPA SW-846 Method 7196A_CR3. The samples were analyzed on 01/26/2016.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

PERCENT SOLIDS
Samples AREA C-TRENCH-3_022_2-3(20160114) (240-59997-1), AREA C-TRENCH-3_010_9-10(20160114) (240-59997-2) and AREA C-TRENCH-3_07_3-4(20160114) (240-59997-3) were analyzed for percent solids in accordance with EPA Method 160.3 MOD. The samples were analyzed on 01/18/2016.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

DATA REPORTING QUALIFIERS

Client: ARCADIS U.S., Inc. Job Number: 240-59997-1

Lab Section	Qualifier	Description
GC/MS VOA		
	B	Compound was found in the blank and sample.
	F1	MS and/or MSD Recovery is outside acceptance limits.
	F2	MS/MSD RPD exceeds control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits
GC/MS Semi VOA		
	B	Compound was found in the blank and sample.
	F1	MS and/or MSD Recovery is outside acceptance limits.
	4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
	E	Result exceeded calibration range.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits
GC VOA		
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC Semi VOA		
	B	Compound was found in the blank and sample.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Rob Ellis
ARCADIS
430 First Avenue North, Ste 720
Minneapolis, MN US 55401

CADENA project ID: E200572
Project: FORD-Twin Cities Assembly Plant
Project number: DE000372.0003
Laboratory: TestAmerica - North Canton
Laboratory submittal: 59997-1
Sample date: 2016-01-14
Report received by CADENA: 2016-02-01
Initial Data Verification completed by CADENA: 2016-02-02

The following minor QC exceptions or missing information were noted:

VOC GCMS
Samples -2, -3 and -3MS surrogate recoveries were diluted to below reliably quantifiable levels so were not used to qualify client sample results.
QC batch 214579 MB had detections of 2-butanone and toluene below RL. Client sample -1 results for toluene should be considered estimated and flagged with UB based on MB detections. Trip blank was considered to be QC sample so was not qualified based on this method blank detection.

GCMS VOC trip blank had detections below the RL for toluene and naphthalene. Associated sample results were already qualified based on method blank detections so qualification of client sample results was not required based on these trip blank detections.

GCMS VOC QC batch 214579 and 215476MS/MSD recovery outliers were not determined using samples from this submittal so qualification of client sample results was not required based on these sample-specific QC outliers.

TCLP SVOC GCMS
QC batch 215452 MB had detections of 2-methylphenol and 3&4-methylphenol below RL. Client sample-3 TCLP SVOC GCMS results for these analytes should be considered estimated and flagged with UB based on MB detections.
TOTAL SVOC GCMS
Samples -2, -3 and -3MS surrogate recoveries were diluted to below reliably quantifiable levels so were not used to qualify client sample results.
QC batch 215094 CCV for pentachlorophenol recovered above the upper control limit. No qualification required based on CCV outlier.
QC batch 215094 sample-3 MS recoveries were diluted to below reliably quantifiable levels so were not used to qualify client sample results.

Wisconsin DRO
QC batch 214526 MB had detection of DRO below RL. No qualification required based on MB detection.

WI-DRO QC batch 214526 did not include MS recovery data due to insufficient sample volume available for spiking according to the laboratory submittal case narrative.

WI-GRO and WI-DRO sample results did not include surrogate recovery data which is an optional QC requirement as specified in the method.

TCLP metals ICP
QC batches 215328 and 215399 MB had detections of several analytes below RL. Client sample-1, -2 and -3 results for arsenic; client samples-1 and -3 results for chromium; client sample-2 results for copper should be considered estimated and flagged with UB.
QC batch 215745 sample-2 MS recoveries for zinc were diluted to below reliably quantifiable levels so were not used to qualify client sample results.

Total metals ICP
QC batches 214580 and 215664 MB had several analytes detected below RL. No qualification required based on MB detections.
QC batch 214773 sample-1 MS/MSD of several analytes recovered outside the control limit, some biased low and some biased high. Based on these:
Sample-1 aluminum, calcium, copper, manganese, lead, zinc and iron MS recoveries were not considered to be statistically reliable so were not used to qualify results due to elevated levels of target analyte in the original sample matrix relative to the amount spiked (4X rule)
Sample-1 antimony, barium and magnesium results should be considered estimated and flagged with J.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

3 Solid sample(s) were analyzed for GCMS VOC, GCMS SVOC, GC VOC, GC Other, Metals and General Chemistry parameter(s). 1 Trip blank was analyzed for GCMS VOC parameters.

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, LCS/LCD RPD, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

Analytical results reported between RDL and MDL are flagged 'J' and considered estimated values.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

SAMPLING AND ANALYSIS SUMMARY

CADENA Project ID: E200572
Laboratory: TestAmerica-North Canton
Laboratory Submittal: 59997-1

Lab Sample ID	Sample ID	Collection Date (mm/yy/dd)	Collection Time (hh:mm:ss)	Volatile Organics by GCMS	Semivolatiles by GCMS	Wisconsin GRO Method	Wisconsin DRO Method	Metals by ICP Spectroscopy	Mercury (Manual Cold Vapor)	Mercury in Solid Waste	Chromium, Hexavalent (Colorimetric)

RE: Project: FORD TCAP
Pace Project No.: 40128587

Dear Kris Hinsley:
Enclosed are the analytical results for sample(s) received by the laboratory on February 24, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Laurie Woelfel

QUALIFIERS

Project: FORD TCAP
Pace Project No.: 40128587

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

Minneapolis, MN US 55401

CADENA project ID: E200572
Project: FORD-Twin Cities Assembly Plant
Project number: DE000372.0003
Laboratory: PACE Laboratories Inc. - Green Bay
Laboratory submittal: 40128587
Sample date: 2016-02-23
Report received by CADENA: 2016-02-29
Initial Data Verification completed by CADENA: 2016-02-29

The following minor QC exceptions or missing information were noted:

PCB sample -004 surrogate recoveries were diluted to below reliably quantifiable levels so were not used to qualify client sample results.

Data verification for the report specified above was completed using the Ford Motor Company Environmental Laboratory Technical Specification, the CADENA Standard Operating Procedure for the Verification of Environmental Analytical Data and the associated analytical methods as references for evaluating the batch QC, sample data and report content. The EPA National Functional Guidelines for validating organic and inorganic data were used as guidance when addressing out of control QC results and the associated data qualifiers.

6 Solid sample(s) were analyzed for PCB and General Chemistry parameter(s).

Sample/MS/MSD Surrogate Recovery, Blank/LCS Surrogate Recovery, LCS/LCD Recovery, MS/MSD Recovery, MS/MSD RPD, Blank Contamination and Hold Time Exception were reviewed as part of our verification.

The definitions of the qualifiers used for this data package are defined in the analytical report. CADENA valid qualifiers are defined in the table below. To view and download a PDF copy of the laboratory analytical report access the CADENA CLMS at http://clms.cadenaco.com/index.cfm.

Please contact me if you have any questions.

Sincerely,

Jim Tomalia

Project Scientist

CADENA Valid Qualifiers

Valid Qualifiers	Description
<	Less than the reported concentration.
>	Greater than the reported concentration.
B	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was greater than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the reported concentration. For Inorganic methods the sample concentration was greater than the RDL and less than 10x the blank concentration and is considered non-detect at the reported concentration.
E	The analyte / Compound reported exceeds the calibration range and is considered estimated.
EMPC	Estimated Minimum Potential Contamination - Dioxin/Furan analyses only.
J	Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of an analyte / compound but the result is less than the sample Quantitation limit, but greater than zero. The flag is also used in data validation to indicate a reported value should be considered estimated due to associated quality assurance deficiencies.
J-	The result is an estimated quantity, but the result may be biased low.
JH	The sample result is considered estimated and is potentially biased high.
JL	The sample result is considered estimated and is potentially biased low.
NJ	Tentatively identified compound with approximated concentration.
R	Indicates the value is considered to be unusable. (Note: The analyte / compound may or may not be present.)
TNTC	Too Numerous to Count - Asbestos and Microbiological Results.
U	Indicates that the analyte / compound was analyzed for, but not detected.
UB	The analyte / compound was detected in the associated blank. For Organic methods the sample concentration was less than the RDL and less than 5x (or 10x for common lab contaminates) the blank concentration and is considered non-detect at the RDL. For Inorganic methods the sample concentration was less than the RDL and less than 10x the blank concentration and is considered non-detect at the RDL.
UJ	The analyte / compound was not detected above the reported sample Quantitation limit. However, the Quantitation limit is considered to be approximate due to associated quality assurance results and may or may not represent the actual limit of Quantitation to accurately and precisely report the analyte in the sample.

TestAmerica
THE LEADER IN ENVIRONMENTAL TESTING

CASE NARRATIVE

CASE NARRATIVE

8C13254

The following report contains the analytical results for one water sample and one quality control sample submitted to TestAmerica North Canton by ARCADIS Geraghty & Miller, Inc from the Ford Twin Cities PHA B E200572 Site, project number FORD-TCAP-03 E200575-2. The samples were received March 13, 2008, according to documented sample acceptance procedures.

This SDG consists of (1) laboratory ID: A8C130254.

TestAmerica utilizes USEPA approved methods in all analytical work. The samples presented in this report were analyzed for the parameter(s) listed on the analytical methods summary page in accordance with the method(s) indicated. A summary of QC data for these analyses is included at the back of the report.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the applicable methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

Any reference within this document to Severn Trent Laboratories, Inc. or STL, should be understood to refer to TestAmerica Laboratories, Inc. (formerly known as Severn Trent Laboratories, Inc.)

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Please refer to the Quality Control Elements Narrative following this case narrative for additional quality control information.

If you have any questions, please call the Project Manager, Denise Pohl, at 330-497-9396.

This report is sequentially paginated. The final page of the report is labeled as "END OF REPORT."

CASE NARRATIVE (continued)

SUPPLEMENTAL QC INFORMATION

SAMPLE RECEIVING

The temperatures of the coolers upon sample receipt were 1.6, 1.8, 2.4, 3.2 and 3.4°C.

GC/MS VOLATILES

The sample(s) that contained concentrations of target analyte(s) at a reportable level in the associated Method Blank(s) were flagged with "B". All target analytes in the Method Blank must be below the reporting limit (RL) or the associated sample(s) must be ND with the exception of common laboratory contaminants.

The sample(s) that contain results between the MDL and the RL were flagged with "J". There is a possibility of false positive or mis-identification at these quantitation levels. In analytical methods requiring confirmation of the analyte reported, confirmation was performed only down to the standard reporting limit (SRL). The acceptance criteria for QC samples may not be met at these quantitation levels.

The matrix spike/matrix spike duplicate(s) for sample(s) AMW-05B(20080311) had recoveries outside acceptance limits. However, since the associated method blank(s) and laboratory control sample(s) were in control, no corrective action was necessary.

2-Chloroethyl vinyl ether cannot be reliably recovered in an acid preserved sample.

GC/MS SEMIVOLATILES

The sample(s) that contained concentrations of target analyte(s) at a reportable level in the associated Method Blank(s) were flagged with "B". All target analytes in the Method Blank must be below the reporting limit (RL) or the associated sample(s) must be ND with the exception of common laboratory contaminants.

The sample(s) that contain results between the MDL and the RL were flagged with "J". There is a possibility of false positive or mis-identification at these quantitation levels. In analytical methods requiring confirmation of the analyte reported, confirmation was performed only down to the standard reporting limit (SRL). The acceptance criteria for QC samples may not be met at these quantitation levels.

The matrix spike/matrix spike duplicate(s) for sample(s) AMW-05B(20080311) had RPD's and recoveries outside acceptance limits. However, since the associated method blank(s) and laboratory control sample(s) were in control, no corrective action was necessary.

CASE NARRATIVE (continued)

GC/MS SEMIVOLATILES (continued)

Batch(s) 8079104 had recoveries and/or RPD's out high in the LCS. Since there were no hits detected in any of the associated samples, no corrective action was necessary.

The Method Blank associated with QC batch(es) 8071037 had surrogate recoveries below acceptance criteria. Upon re-extraction and re-analysis, all QC met acceptance criteria, however, sample holding times had been exceeded. Both sets of data have been reported.

GASOLINE RANGE ORGANICS

The analytical results met the requirements of the laboratory's QA/QC program.

POLYCHLORINATED BIPHENYLS-8082

The analytical results met the requirements of the laboratory's QA/QC program.

DIESEL RANGE ORGANICS

The sample(s) that contained concentrations of target analyte(s) at a reportable level in the associated Method Blank(s) were flagged with "B". All target analytes in the Method Blank must be below the reporting limit (RL) or the associated sample(s) must be ND with the exception of common laboratory contaminants.

The sample(s) that contain results between the MDL and the RL were flagged with "J". There is a possibility of false positive or mis-identification at these quantitation levels. In analytical methods requiring confirmation of the analyte reported, confirmation was performed only down to the standard reporting limit (SRL). The acceptance criteria for QC samples may not be met at these quantitation levels.

METALS

The sample(s) that contain results between the MDL and the RL were flagged with "B". There is the possibility of false positive or mis-identification at these quantitation levels. The acceptance criteria for the ICB, CCB, and Method Blank are +/- the standard reporting limit (SRL).

The sample(s) that contained concentrations of target analyte(s) at a reportable level in the associated Method Blank(s) were flagged with "J". Refer to the sample report pages for the affected analyte(s).

No ICP Trace Form IX was provided for batch(es) 8074016. The serial dilution was performed on a different sample from the same QC batch(es).

QUALITY CONTROL ELEMENTS NARRATIVE

TestAmerica North Canton conducts a quality assurance/quality control (QA/QC) program designed to provide scientifically valid and legally defensible data. Toward this end, several types of quality control indicators are incorporated into the QA/QC program, which is described in detail in QA Policy, QA-003. These indicators are introduced into the sample testing process to provide a mechanism for the assessment of the analytical data.

QC BATCH

Environmental samples are taken through the testing process in groups called QUALITY CONTROL BATCHES (QC batches). A QC batch contains up to twenty environmental samples of a similar matrix (water, soil) that are processed using the same reagents and standards. TestAmerica North Canton requires that each environmental sample be associated with a QC batch.

Several quality control samples are included in each QC batch and are processed identically to the twenty environmental samples.

For SW846/RCRA methods, QC samples include a METHOD BLANK (MB), a LABORATORY CONTROL SAMPLE (LCS) and, where appropriate, a MATRIX SPIKE/MATRIX SPIKE DUPLICATE (MS/MSD) pair or a MATRIX SPIKE/SAMPLE DUPLICATE (MS/DU) pair. If there is insufficient sample to perform an MS/MSD or an MS/DU, then a LABORATORY CONTROL SAMPLE DUPLICATE (LCSD) is included in the QC batch.

For 600 series/CWA methods, QC samples include a METHOD BLANK (MB), a LABORATORY CONTROL SAMPLE (LCS) and, where appropriate, a MATRIX SPIKE (MS). An MS is prepared and analyzed at a 10% frequency for GC Methods and at a 5% frequency for GC/MS methods.

LABORATORY CONTROL SAMPLE

The Laboratory Control Sample is a QC sample that is created by adding known concentrations of a full or partial set of target analytes to a matrix similar to that of the environmental samples in the QC batch. Multi peak responders may not be included in the target spike list due to co-elution. The LCS analyte recovery results are used to monitor the analytical process and provide evidence that the laboratory is performing the method within acceptable guidelines. All control analytes indicated by a bold type in the LCS must meet acceptance criteria. Failure to meet the established recovery guidelines requires the repreparation and reanalysis of all samples in the QC batch. Comparison of only the failed parameters from the first batch are evaluated. The only exception to the rework requirement is that if the LCS recoveries are biased high and the associated sample is ND (non-detected) for the parameter(s) of interest, the batch is acceptable.

At times, a Laboratory Control Sample Duplicate (LCSD) is also included in the QC batch. An LCSD is a QC sample that is created and handled identically to the LCS. Analyte recovery data from the LCSD is assessed in the same way as that of the LCS. The LCSD recoveries, together with the LCS recoveries, are used to determine the reproducibility (precision) of the analytical system. Precision data are expressed as relative percent differences (RPDs). If the RPD fails for an LCS/LCSD and yet the recoveries are within acceptance criteria, the batch is still acceptable.

METHOD BLANK

The Method Blank is a QC sample consisting of all the reagents used in analyzing the environmental samples contained in the QC batch. Method Blank results are used to determine if interference or contamination in the analytical system could lead to the reporting of false positive data or elevated analyte concentrations. All target analytes must be below the reporting limits (RL) or the associated sample(s) must be ND except under the following circumstances:

- Common organic contaminants may be present at concentrations up to 5 times the reporting limits. Common metals contaminants may be present at concentrations up to 2 times the reporting limit, or the reported blank concentration must be twenty fold less than the concentration reported in the associated environmental samples. (See common laboratory contaminants listed in the table.)

Volatile (GC or GC/MS)	Semivolatile (GC/MS)	Metals ICP-MS	Metals ICP Trace
Methylene Chloride, Acetone, 2-Butanone	Phthalate Esters	Copper, Iron, Zinc, Lead, Calcium, Magnesium, Potassium, Sodium, Barium, Chromium, Manganese	Copper, Iron, Zinc, Lead

- Organic blanks will be accepted if compounds detected in the blank are present in the associated samples at levels 10 times the blank level. Inorganic blanks will be accepted if elements detected in the blank are present in the associated samples at 20 times the blank level.

- Blanks will be accepted if the compounds/elements detected are not present in any of the associated environmental samples.

Failure to meet these Method Blank criteria requires the repreparation and reanalysis of all samples in the QC batch.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE

A Matrix Spike and a Matrix Spike Duplicate are a pair of environmental samples to which known concentrations of a full or partial set of target analytes are added. The MS/MSD results are determined in the same manner as the results of the environmental sample used to prepare the MS/MSD. The analyte recoveries and the relative percent differences (RPDs) of the recoveries are calculated and used to evaluate the effect of the sample matrix on the analytical results. Due to the potential variability of the matrix of each sample, the MS/MSD results may not have an immediate bearing on any samples except the one spiked; therefore, the associated batch MS/MSD may not reflect the same compounds as the samples contained in the analytical report. When these MS/MSD results fail to meet acceptance criteria, the data is evaluated. If the LCS is within acceptance criteria, the batch is considered acceptable.

For certain methods, a Matrix Spike/Sample Duplicate (MS/DU) may be included in the QC batch in place of the MS/MSD. For the parameters (i.e. pH, ignitability) where it is not possible to prepare a spiked sample, a Sample Duplicate may be included in the QC batch. However, a Sample Duplicate is less likely to provide usable precision statistics depending on the likelihood of finding concentrations below the standard reporting limit. When the Sample Duplicate result fails to meet acceptance criteria, the data is evaluated.

For certain methods (600 series methods/CWA), a Matrix Spike is required in place of a Matrix Spike/Matrix Spike Duplicate (MS/MSD) or Matrix Spike/Sample Duplicate (MS/DU).

The acceptance criteria do not apply to samples that are diluted.

SURROGATE COMPOUNDS

In addition to these batch-related QC indicators, each organic environmental and QC sample is spiked with surrogate compounds. Surrogates are organic chemicals that behave similarly to the analytes of interest and that are rarely present in the environment. Surrogate recoveries are used to monitor the individual performance of a sample in the analytical system.

If surrogate recoveries are biased high in the LCS, LCSD, or the Method Blank, and the associated sample(s) are ND, the batch is acceptable. Otherwise, if the LCS, LCSD, or Method Blank surrogate(s) fail to meet recovery criteria, the entire sample batch is reprepared and reanalyzed. If the surrogate recoveries are outside criteria for environmental samples, the samples will be reprepared and reanalyzed unless there is objective evidence of matrix interference or if the sample dilution is greater than the threshold outlined in the associated method SOP.

The acceptance criteria do not apply to samples that are diluted. All other surrogate recoveries will be reported.

For the GC/MS BNA methods, the surrogate criterion is that two of the three surrogates for each fraction must meet acceptance criteria. The third surrogate must have a recovery of ten percent or greater.

For the Pesticide and PCB methods, the surrogate criterion is that one of two surrogate compounds must meet acceptance criteria. The second surrogate must have a recovery of 10% or greater.

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

SW846 8270C CHECK SAMPLE RECOVERY

Lab Name: TestAmerica Laboratories, Inc. Client: ARCADIS U.S., Inc.

Lab Code: TALCAN SDG No: 8C13254

Lot #: A8C190000 WO #: KJTNH1AC
BATCH: 8079104

COMPOUND	SPIKE ADDED (ug/L)	SAMPLE CONCENT. (ug/L)	% REC	QC LIMITS REC	QUAL
Phenanthrene	20	17	85	52- 114	
Indeno(1,2,3-cd)pyrene	20	19	94	46- 121	
Di-n-butyl phthalate	20	19	93	55- 122	
Hexachlorocyclopentadiene	20	17	86	10- 110	
Benzoic acid	20	ND	16	10- 129	
1,4-Dioxane	20	7.8	39	10- 110	
Atrazine	20	19	93	50- 130	
Acetophenone	20	15	74	50- 130	
1,1'-Biphenyl	20	15	77	50- 130	
Caprolactam	20	4.6	23*	50- 130	a
Benzyl alcohol	20	12	62	10- 130	
N-Nitrosodimethylamine	20	9.2	46	10- 130	
1-Methylnaphthalene	20	15	77	10- 130	
1,2-Dinitrobenzene	20	19	93	10- 130	

NOTES(S):

a Spiked analyte recovery is outside stated control limits.

* Values outside of QC limits

Spike Recovery: 2 out of 76 outside limits
